(54) Title: COLON AND COLON CANCER ASSOCIATED POLYNUCLEOTIDES AND POLYPEPTIDES

(57) Abstract: This invention relates to newly identified colon or colon cancer related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "colon cancer antigens", and the use of such colon cancer antigens for targeting specific cell types and/or diagnosing, detecting, preventing and treating disorders of the colon, particularly the presence of colon cancer and colon cancer metastases. This invention relates to colon cancer antigens as well as vectors, host cells, antibodies directed to colon cancer antigens and the recombinant or synthetic methods for producing the same. Also provided are diagnostic methods for diagnosing and treating, preventing and/or prognosing disorders related to the colon, including colon cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of colon cancer antigens of the invention. The present invention further relates to inhibiting the production and function of the polypeptides of the present invention.

## Colon and Colon Cancer Associated Polynucleotides and Polypeptides

### *Field of the Invention*

5

This invention relates to newly identified colon or colon cancer related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "colon cancer antigens," and the use of such colon cancer antigens for targeting specific cell types and/or diagnosing, detecting, preventing and treating disorders of the colon, particularly the presence of colon cancer and colon cancer metastases. This invention relates to colon cancer antigens as well as vectors, host cells, antibodies directed to colon cancer antigens and the recombinant or synthetic methods for producing the same. Also provided are diagnostic methods for diagnosing and treating, preventing and/or prognosing disorders related to the colon, including colon cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of colon cancer antigens of the invention. The present invention further relates to inhibiting the production and function of the polypeptides of the present invention.

20

### *Background of the Invention*

Cell growth is a carefully regulated process which responds to specific needs of the body. Occasionally, the intricate, and highly regulated controls dictating the rules for cellular division break down. When this occurs, the cell begins to grow and divide independently of its homeostatic regulation resulting in a condition commonly referred to as cancer. In fact, cancer is the second leading cause of death among Americans aged 25-44.

Colorectal cancers are among the most common cancers in men and women in the U.S. and are one of the leading causes of death. Other than surgical resection no other systemic or adjuvant therapy is available. Vogelstein and colleagues have described the sequence of genetic events that appear to be associated with the multistep process of colon cancer development in humans (Trends Genet 9(4):138-41 (1993)). An understanding of the molecular genetics of carcinogenesis, however, has not led to preventative or therapeutic measures. It can be expected that advances in molecular genetics will lead to better risk

assessment and early diagnosis but colorectal cancers will remain a deadly disease for a majority of patients due to the lack of an adjuvant therapy. Adjuvant or systemic treatments are likely to arise from a better understanding of the autocrine factors responsible for the continued proliferation of cancer cells.

5           Colorectal carcinoma is a malignant neoplastic disease. There is a high incidence of colorectal carcinoma in the Western world, particularly in the United States. Tumors of this type often metastasize through lymphatic and vascular channels. Many patients with colorectal carcinoma eventually die from this disease. In fact, it is estimated that 62,000 persons in the United States alone die of colorectal carcinoma annually.

10           At the present time the only systemic treatment available for colon cancer is chemotherapy. However, chemotherapy has not proven to be very effective for the treatment of colon cancers for several reasons, the most important of which is the fact that colon cancers express high levels of the MDR gene (that codes for multi-drug resistance gene products). The MDR gene products actively transport the toxic substances out of the cell  
15 before the chemotherapeutic agents can damage the DNA machinery of the cell. These toxic substances harm the normal cell populations more than they harm the colon cancer cells for the above reasons.

          There is no effective systemic treatment for treating colon cancers other than surgically removing the cancers. In the case of several other cancers, including breast  
20 cancers, the knowledge of growth promoting factors (such as EGF, estradiol, IGF-11) that appear to be expressed or effect the growth of the cancer cells, has been translated for treatment purposes. But in the case of colon cancers this knowledge has not been applied and therefore the treatment outcome for colon cancers remains bleak.

          Thus, the discovery of new human colon and colon cancer related polynucleotides  
25 and the polypeptides encoded by them satisfies a need in the art by providing new compositions which are useful in the diagnosis, prevention and treatment of disorders of the colon, particularly tumors, especially of the intestine; inflammatory disorders; enterocolitis; miscellaneous intestinal inflammatory disorders; ulcerative disorders; and/or noncancerous tumors.

30

### ***Summary of the Invention***

This invention relates to newly identified colon and colon cancer related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "colon cancer antigens." This invention relates to colon and colon cancer related polypeptides as well as vectors, host cells, antibodies directed to colon cancer antigens and the recombinant methods for producing the same. Also provided are diagnostic methods for diagnosing and treating, preventing and/or prognosing disorders related to the colon, including colon cancer, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of colon cancer antigens of the invention.

### ***Detailed Description***

#### **Tables**

Table 1 summarizes some of the colon cancer antigens encompassed by the invention (including cDNA clones related to the sequences (Clone ID NO:Z), polynucleotide sequences (contig identifier (Contig ID:) or sequence identifier (Sequence ID:) and nucleotide sequence identifier (SEQ ID NO:X)) and further summarizes certain characteristics of the colon and colon cancer related polynucleotides and the polypeptides encoded thereby. The first column shows the "SEQ ID NO:X" for each of the 4277 colon and colon cancer related polynucleotide sequences of the invention. The second column provides a unique "Sequence/Contig ID" identification for each of the colon and colon cancer related polynucleotide and/or polypeptide sequences. The third column, "Gene Name," and the fourth column, "Overlap," provide a putative identification of the gene based on the sequence similarity of its translation product to an amino acid sequence found in a publicly accessible gene database and the database accession no. for the database sequence having similarity, respectively. The sixth and seventh columns provide the location (nucleotide position nos. within the sequence/contig), "Start" and "End", in the polynucleotide sequence "SEQ ID NO:X" that delineate the preferred ORF shown in the sequence listing as SEQ ID NO:Y (column five). The eighth and ninth columns provide the "%Id" (percent identity) and "%Si" (percent similarity), respectively, observed between the aligned sequence segments of the translation product of SEQ ID NO:X and the database sequence. The tenth column provides a

unique "Clone ID:Z" for a cDNA clone related to each contig sequence. The eleventh column provides the "Cloning vector" contained in the cDNA clone ID.

Table 2 summarizes ATCC Deposits, Deposit dates, and ATCC designation numbers of deposits made with the ATCC in connection with the present application.

5        Table 3 summarizes the expression profile of polynucleotides corresponding to the clones disclosed in Table 1. The first column provides a unique clone identifier, "Clone ID", for a cDNA clone related to each contig sequence disclosed in Table 1. Column 2, "Library Codes" shows the expression profile of tissue and/or cell line libraries which express the polynucleotides of the invention. Each Library Code in column 2 represents a tissue/cell  
10        source identifier code corresponding to the Library Code and Library description provided in Table 5. Expression of these polynucleotides was not observed in the other tissues and/or cell libraries tested. One of skill in the art could routinely use this information to identify tissues which show a predominant expression pattern of the corresponding polynucleotide of the invention or to identify polynucleotides which show predominant and/or specific tissue  
15        expression.

Table 4, column 1, provides a nucleotide sequence identifier, "SEQ ID NO:X," that matches a nucleotide SEQ ID NO:X disclosed in Table 1, column 5. Table 4, column 2, provides the chromosomal location, "Cytologic Band or Chromosome," of polynucleotides corresponding to SEQ ID NO:X. Chromosomal location was determined by finding exact  
20        matches to EST and cDNA sequences contained in the NCBI (National Center for Biotechnology Information) UniGene database. Given a presumptive chromosomal location, disease locus association was determined by comparison with the Morbid Map, derived from Online Mendelian Inheritance in Man (Online Mendelian Inheritance in Man, OMIM™. McKusick-Nathans Institute for Genetic Medicine, Johns Hopkins University (Baltimore, MD) and National Center for Biotechnology Information, National Library of Medicine  
25        (Bethesda, MD) 2000. World Wide Web URL: <http://www.ncbi.nlm.nih.gov/omim/>). If the putative chromosomal location of the Query overlapped with the chromosomal location of a Morbid Map entry, the OMIM reference identification number of the morbid map entry is provided in Table 4, column 3, labelled "OMIM ID." A key to the OMIM reference  
30        identification numbers is provided in Table 6.

Table 5 provides a key to the Library Code disclosed in Table 3. Column 1 provides the Library Code disclosed in Table 3, column 2. Column 2 provides a description of the tissue or cell source from which the corresponding library was derived.

Table 6 provides a key to the OMIM reference identification numbers disclosed in Table 4, column 3. OMIM reference identification numbers (Column 1) were derived from Online Mendelian Inheritance in Man (Online Mendelian Inheritance in Man, OMIM. McKusick-Nathans Institute for Genetic Medicine, Johns Hopkins University (Baltimore, MD) and National Center for Biotechnology Information, National Library of Medicine, (Bethesda, MD) 2000. World Wide Web URL: <http://www.ncbi.nlm.nih.gov/omim/>). Column 2 provides diseases associated with the cytologic band disclosed in Table 4, column 2, as determined using the Morbid Map database.

Table 7 indicates public ESTs, of which at least one, two, three, four, five, ten, fifteen or more of any one or more of these public EST sequences are optionally excluded from certain embodiments of the invention.

Table 8 lists residues comprising antigenic epitopes of antigenic epitope-bearing fragments present in each of the preferred ORFs (SEQ ID NO:Y) encoded by the colon or colon cancer related polynucleotides described in Table 1 as predicted by the inventors using the algorithm of Jameson and Wolf, (1988) Comp. Appl. Biosci. 4:181-186. The Jameson-Wolf antigenic analysis was performed using the computer program PROTEAN (Version 3.11 for the Power MacIntosh, DNASTAR, Inc., 1228 South Park Street Madison, WI). Colon and/or colon cancer related polypeptides shown in Table 1 may possess one or more antigenic epitopes comprising residues described in Table 8. It will be appreciated that depending on the analytical criteria used to predict antigenic determinants, the exact address of the determinant may vary slightly. The residues and locations shown described in Table 8 correspond to the amino acid sequences for each colon and/or colon cancer related polypeptide sequence shown in the Sequence Listing.

Table 9 shows the cDNA libraries sequenced, and ATCC designation numbers and vector information relating to these cDNA libraries.

### 30 **Definitions**

The following definitions are provided to facilitate understanding of certain terms used throughout this specification.

In the present invention, "isolated" refers to material removed from its original environment (e.g., the natural environment if it is naturally occurring), and thus is altered "by the hand of man" from its natural state. For example, an isolated polynucleotide could be part of a vector or a composition of matter, or could be contained within a cell, and still be "isolated" because that vector, composition of matter, or particular cell is not the original environment of the polynucleotide. The term "isolated" does not refer to genomic or cDNA libraries, whole cell total or mRNA preparations, genomic DNA preparations (including those separated by electrophoresis and transferred onto blots), sheared whole cell genomic DNA preparations or other compositions where the art demonstrates no distinguishing features of the polynucleotide/sequences of the present invention.

As used herein, a "polynucleotide" refers to a molecule having a nucleic acid sequence contained in SEQ ID NO:X or the cDNA clone deposited with the ATCC. For example, the polynucleotide can contain the nucleotide sequence of the full length cDNA sequence, including the 5' and 3' untranslated sequences, the coding region, as well as fragments, epitopes, domains, and variants of the nucleic acid sequence. Moreover, as used herein, a "polypeptide" refers to a molecule having the translated amino acid sequence generated from the polynucleotide as broadly defined.

In the present invention, "SEQ ID NO:X" was often generated by overlapping sequences contained in multiple clones (contig analysis). A representative clone containing all or most of the sequence for SEQ ID NO:X is deposited at Human Genome Sciences, Inc. (HGS) in a catalogued and archived library. As shown in Table 1, each clone is identified by a cDNA Clone ID (Identifier). Each Clone ID is unique to an individual clone and the Clone ID is all the information needed to retrieve a given clone from the HGS library. In addition to the individual cDNA clone deposits, the cDNA clones were deposited at the American Type Culture Collection (hereinafter "ATCC"). As mentioned below, Table 1 correlates the Clone ID names with SEQ ID NOs. Furthermore, it is possible to retrieve a given cDNA clone from the ATCC deposit by techniques known in the art and described elsewhere herein. The ATCC is located at 10801 University Boulevard, Manassas, Virginia 20110-2209, USA. The ATCC deposits were made pursuant to the terms of the Budapest Treaty on the international recognition of the deposit of microorganisms for the purposes of patent procedure.

In specific embodiments, the polynucleotides of the invention are at least 15, at least 30, at least 50, at least 100, at least 125, at least 500, or at least 1000 continuous nucleotides but are less than or equal to 300 kb, 200 kb, 100 kb, 50 kb, 15 kb, 10 kb, 7.5kb, 5 kb, 2.5 kb, 2.0 kb, or 1 kb, in length. In a further embodiment, polynucleotides of the invention  
5 comprise a portion of the coding sequences, as disclosed herein, but do not comprise all or a portion of any intron. In another embodiment, the polynucleotides comprising coding sequences do not contain coding sequences of a genomic flanking gene (i.e., 5' or 3' to the gene of interest in the genome). In other embodiments, the polynucleotides of the invention do not contain the coding sequence of more than 1000, 500, 250, 100, 50, 25, 20, 15, 10, 5, 4,  
10 3, 2, or 1 genomic flanking gene(s).

A "polynucleotide" of the present invention also includes those polynucleotides capable of hybridizing, under stringent hybridization conditions, to sequences contained in SEQ ID NO:X, the complement thereof, or the cDNA clone within the pool of cDNA clones deposited with the ATCC. "Stringent hybridization conditions" refers to an overnight  
15 incubation at 42 degree C in a solution comprising 50% formamide, 5x SSC (750 mM NaCl, 75 mM trisodium citrate), 50 mM sodium phosphate (pH 7.6), 5x Denhardt's solution, 10% dextran sulfate, and 20 µg/ml denatured, sheared salmon sperm DNA, followed by washing the filters in 0.1x SSC at about 65 degree C.

Also contemplated are nucleic acid molecules that hybridize to the polynucleotides of  
20 the present invention at lower stringency hybridization conditions. Changes in the stringency of hybridization and signal detection are primarily accomplished through the manipulation of formamide concentration (lower percentages of formamide result in lowered stringency); salt conditions, or temperature. For example, lower stringency conditions include an overnight incubation at 37 degree C in a solution comprising 6X SSPE (20X SSPE = 3M NaCl; 0.2M  
25 NaH<sub>2</sub>PO<sub>4</sub>; 0.02M EDTA, pH 7.4), 0.5% SDS, 30% formamide, 100 ug/ml salmon sperm blocking DNA; followed by washes at 50 degree C with 1XSSPE, 0.1% SDS. In addition, to achieve even lower stringency, washes performed following stringent hybridization can be done at higher salt concentrations (e.g. 5X SSC).

Note that variations in the above conditions may be accomplished through the  
30 inclusion and/or substitution of alternate blocking reagents used to suppress background in hybridization experiments. Typical blocking reagents include Denhardt's reagent, BLOTTO, heparin, denatured salmon sperm DNA, and commercially available proprietary formulations.

The inclusion of specific blocking reagents may require modification of the hybridization conditions described above, due to problems with compatibility.

Of course, a polynucleotide which hybridizes only to polyA<sup>+</sup> sequences (such as any 3' terminal polyA<sup>+</sup> tract of a cDNA shown in the sequence listing), or to a complementary stretch of T (or U) residues, would not be included in the definition of "polynucleotide," since  
5 such a polynucleotide would hybridize to any nucleic acid molecule containing a poly (A) stretch or the complement thereof (e.g., practically any double-stranded cDNA clone generated using oligo dT as a primer).

The polynucleotide of the present invention can be composed of any  
10 polyribonucleotide or polydeoxribonucleotide, which may be unmodified RNA or DNA or modified RNA or DNA. For example, polynucleotides can be composed of single- and double-stranded DNA, DNA that is a mixture of single- and double-stranded regions, single- and double-stranded RNA, and RNA that is mixture of single- and double-stranded regions, hybrid molecules comprising DNA and RNA that may be single-stranded or, more typically,  
15 double-stranded or a mixture of single- and double-stranded regions. In addition, the polynucleotide can be composed of triple-stranded regions comprising RNA or DNA or both RNA and DNA. A polynucleotide may also contain one or more modified bases or DNA or RNA backbones modified for stability or for other reasons. "Modified" bases include, for example, tritylated bases and unusual bases such as inosine. A variety of modifications can  
20 be made to DNA and RNA; thus, "polynucleotide" embraces chemically, enzymatically, or metabolically modified forms.

The polypeptide of the present invention can be composed of amino acids joined to each other by peptide bonds or modified peptide bonds, i.e., peptide isosteres, and may contain amino acids other than the 20 gene-encoded amino acids. The polypeptides may be  
25 modified by either natural processes, such as posttranslational processing, or by chemical modification techniques which are well known in the art. Such modifications are well described in basic texts and in more detailed monographs, as well as in a voluminous research literature. Modifications can occur anywhere in a polypeptide, including the peptide backbone, the amino acid side-chains and the amino or carboxyl termini. It will be  
30 appreciated that the same type of modification may be present in the same or varying degrees at several sites in a given polypeptide. Also, a given polypeptide may contain many types of modifications. Polypeptides may be branched, for example, as a result of ubiquitination, and

they may be cyclic, with or without branching. Cyclic, branched, and branched cyclic polypeptides may result from posttranslation natural processes or may be made by synthetic methods. Modifications include acetylation, acylation, ADP-ribosylation, amidation, covalent attachment of flavin, covalent attachment of a heme moiety, covalent attachment of a nucleotide or nucleotide derivative, covalent attachment of a lipid or lipid derivative, covalent attachment of phosphatidylinositol, cross-linking, cyclization, disulfide bond formation, demethylation, formation of covalent cross-links, formation of cysteine, formation of pyroglutamate, formylation, gamma-carboxylation, glycosylation, GPI anchor formation, hydroxylation, iodination, methylation, myristoylation, oxidation, pegylation, proteolytic processing, phosphorylation, prenylation, racemization, selenoylation, sulfation, transfer-RNA mediated addition of amino acids to proteins such as arginylation, and ubiquitination. (See, for instance, PROTEINS - STRUCTURE AND MOLECULAR PROPERTIES, 2nd Ed., T. E. Creighton, W. H. Freeman and Company, New York (1993); POSTTRANSLATIONAL COVALENT MODIFICATION OF PROTEINS, B. C. Johnson, Ed., Academic Press, New York, pgs. 1-12 (1983); Seifter et al., Meth Enzymol 182:626-646 (1990); Rattan et al., Ann NY Acad Sci 663:48-62 (1992).)

"SEQ ID NO:X" refers to a polynucleotide sequence while "SEQ ID NO:Y" refers to a polypeptide sequence. SEQ ID NO:X is identified by an integer specified in column 1 of Table 1. A translated open reading frame (ORF) encoded by polynucleotide SEQ ID NO:X, SEQ ID NO:Y, is shown in column nine of Table 1. There are 4277 colon and/or colon cancer related polynucleotide sequences described in Table 1 and shown in the sequence listing. Likewise there are 4277 colon and/or colon cancer related polypeptide sequences shown in the sequence listing, one polypeptide sequence for each of the polynucleotide sequences. The polynucleotide sequences are shown in the sequence listing immediately followed by all of the polypeptide sequences.

"A polypeptide having biological activity" refers to polypeptides exhibiting activity similar, but not necessarily identical to, an activity of a polypeptide of the present invention, including mature forms, as measured in a particular biological assay, with or without dose dependency. In the case where dose dependency does exist, it need not be identical to that of the polypeptide, but rather substantially similar to the dose-dependence in a given activity as compared to the polypeptide of the present invention (i.e., the candidate polypeptide will exhibit greater activity or not more than about 25-fold less and, preferably, not more than

about tenfold less activity, and most preferably, not more than about three-fold less activity relative to the polypeptide of the present invention).

The polynucleotides of the invention may be arrayed onto a nitrocellulose filter and screened with labelled mRNA which has been isolated from particular normal or diseased tissues, as described in Example 3. Known polynucleotide sequences are included in the array as hybridization controls, either because of their demonstrated tissue specificity or because they represent known surface molecules which may after further study show a predominant tissue expression and be useful antibody targets.

#### 10 **Colon and/or Colon Cancer Related Polynucleotides and Polypeptides of the Invention**

It has been discovered herein that the polynucleotides described in Table 1 are expressed at significantly enhanced levels in human colon and colon cancer tissues. Accordingly, such polynucleotides, polypeptides encoded by such polynucleotides, and antibodies specific for such polypeptides find use in the prediction, diagnosis, treatment, and prevention of disorders related to the colon, including, but not limited to colon cancer, as more fully described below.

Table 1 summarizes some of the polynucleotides encompassed by the invention (including polynucleotide sequences (SEQ ID NO:X) and the related cDNA clones (Clone ID:Z)) and further summarizes certain characteristics of these colon and/or colon cancer related polynucleotides, and the polypeptides encoded thereby.

The first column of Table 1 shows the "SEQ ID NO:X" for each of the 4277 polynucleotide sequences of the invention. The second column provides a unique "Sequence/Contig ID" for each sequence.

5 The third column in Table 1, "Gene Name", provides a putative identification of the gene based on the sequence similarity of its translation product to an amino acid sequence found in a publicly accessible gene database, such as GenBank (NCBI). Methods for determining such sequence similarity are described in Example 1, below. The great majority of the cDNA sequences reported in Table 1 are unrelated to any sequences previously described in the literature. The fourth column in Table  
10 1, "Overlap," provides the database accession no. for the database sequence having similarity.

The preferred translated amino acid sequence, is identified in column five as "AA SEQ ID NO:Y," although other reading frames can also be easily translated using known molecular biology techniques. The polypeptides produced by these  
15 alternative open reading frames are specifically contemplated by the present invention. Polynucleotides encoding an amino acid sequence comprising these regions are also embodied, as are polynucleotides which hybridize to polynucleotides encoding these regions.

The sixth and seventh columns in Table 1 provide the location (nucleotide  
20 position nos.), "Start" and "End," in the polynucleotide sequence "SEQ ID NO:X" that aligns with homologous database sequence. In one embodiment, the invention provides a polypeptide comprising an amino acid sequence encoded by the portion of SEQ ID NO:X delineated by "Start" and "End". Also provided are polynucleotides encoding such polypeptides.

25 The eighth and ninth columns provide the "%Id" (percent identity) and "% Si" (percent similarity) observed between the aligned sequence segments of the translation product of SEQ ID NO:X and the database sequence. The eleventh and twelfth columns shown in Table 1 provide a unique Clone identifier (Clone ID:Z) and the Cloning vector contained in the cDNA Clone ID, respectively. At least a portion  
30 of SEQ ID NO:X was determined by directly sequencing the referenced clone. The reference clone may have more sequence than described in the sequence listing or the clone may have less. In the vast majority of cases, however, the clone is believed to

encode a full-length polypeptide. In the case where a clone is not full-length, a full-length cDNA can be obtained by methods described elsewhere herein.

SEQ ID NO:X and the translated SEQ ID NO:Y are sufficiently accurate and otherwise suitable for a variety of uses well known in the art and described further below. For instance, SEQ ID NO:X is useful for designing nucleic acid hybridization probes that will detect nucleic acid sequences contained in SEQ ID NO:X or the cDNA contained in the deposited clone. These probes will also hybridize to nucleic acid molecules in biological samples, thereby enabling immediate applications in chromosome mapping, linkage analysis, tissue identification and/or typing, and a variety of forensic and diagnostic methods of the invention. Similarly, polypeptides identified from SEQ ID NO:Y may be used to generate antibodies which bind specifically to the colon and/or colon cancer related antigen polypeptides encoded by the cDNA clones identified in Table 1.

Nevertheless, DNA sequences generated by sequencing reactions can contain sequencing errors. The errors exist as misidentified nucleotides, or as insertions or deletions of nucleotides in the generated DNA sequence. The erroneously inserted or deleted nucleotides cause frame shifts in the reading frames of the predicted amino acid sequence. In these cases, the predicted amino acid sequence diverges from the actual amino acid sequence, even though the generated DNA sequence may be greater than 99.9% identical to the actual DNA sequence (for example, one base insertion or deletion in an open reading frame of over 1000 bases).

Accordingly, for those applications requiring precision in the nucleotide sequence or the amino acid sequence, the present invention provides not only the generated nucleotide sequence identified as SEQ ID NO:X and the predicted translated amino acid sequence identified as SEQ ID NO:Y, but also a sample of plasmid DNA containing a human cDNA of the invention deposited with the ATCC, as set forth in Table 1. The nucleotide sequence of each deposited clone can readily be determined by sequencing the deposited clone in accordance with known methods. The predicted amino acid sequence can then be verified from such deposits. Moreover, the amino acid sequence of the protein encoded by a particular clone can also be directly determined by peptide sequencing or by expressing the protein in a

suitable host cell containing the deposited human cDNA, collecting the protein, and determining its sequence.

The present invention also relates to vectors or plasmids which include such DNA sequences, as well as the use of the DNA sequences. Table 2 shows the material  
5 deposited with the ATCC, the Deposit Date and the ATCC Designation Number.

**Table 2**

each is a mixture of cDNA clones derived from a variety of human tissue and cloned  
10 in either a plasmid vector or a phage vector, as shown in Table 9. These deposits are referred to as "the deposits" herein. The tissues from which the clones were derived are listed in Table 9, and the vector in which the cDNA is contained is also indicated in Table 9 as well as Table 1. The deposited material includes the cDNA clones which were partially sequenced and listed in Table 1. Thus, the DNA sequence of  
15 Table 1 is only a portion of the sequence included in the clone from which the sequence was derived. Thus, a clone which is isolatable from the ATCC Deposits by

use of a sequence listed in Table 1 may include the entire coding region of a human gene or in other cases such clone may include a substantial portion of the coding region of a human gene. Although the sequence listing lists only a portion of the DNA sequence in a clone included in the ATCC Deposits, it is well within the ability  
5 of one skilled in the art to complete the sequence of the DNA included in a clone isolatable from the ATCC Deposits by use of a sequence (or portion thereof) listed in Table 1 by procedures hereinafter further described, and others apparent to those skilled in the art.

The present invention also relates to the genes corresponding to SEQ ID  
10 NO:X, SEQ ID NO:Y, or the deposited clone. The corresponding gene can be isolated in accordance with known methods using the sequence information disclosed herein. Such methods include preparing probes or primers from the disclosed sequence and identifying or amplifying the corresponding gene from appropriate sources of genomic material.

15 Also provided in the present invention are allelic variants, orthologs, and/or species homologs. Procedures known in the art can be used to obtain full-length genes, allelic variants, splice variants, full-length coding portions, orthologs, and/or species homologs of genes corresponding to SEQ ID NO:X, SEQ ID NO:Y, or the deposited clone, using information from the sequences disclosed herein or the  
20 libraries deposited with the ATCC. For example, allelic variants and/or species homologs may be isolated and identified by making suitable probes or primers from the sequences provided herein and screening a suitable nucleic acid source for allelic variants and/or the desired homologue.

Table 3 summarizes the expression profile of polynucleotides corresponding  
25 to the clones disclosed in Table 1. The first column provides a unique clone identifier, "Clone ID:Z", for a cDNA clone related to each contig sequence disclosed in Table 1. Column 2, "Library Codes" shows the expression profile of tissue and/or cell line libraries which express the polynucleotides of the invention. Each Library Code in column 2 represents a tissue/cell source identifier code corresponding to the  
30 Library Code and Library description provided in Table 5. Expression of these polynucleotides was not observed in the other tissues and/or cell libraries tested. One of skill in the art could routinely use this information to identify tissues which show a

predominant expression pattern of the corresponding polynucleotide of the invention or to identify polynucleotides which show predominant and/or specific tissue expression.

Table 4, column 1, provides a nucleotide sequence identifier, "SEQ ID NO:X," that matches a nucleotide SEQ ID NO:X disclosed in Table 1, column 5. Table 4, column 2, provides the chromosomal location, "Cytologic Band or Chromosome," of polynucleotides corresponding to SEQ ID NO:X. Chromosomal location was determined by finding exact matches to EST and cDNA sequences contained in the NCBI (National Center for Biotechnology Information) UniGene database. Given a presumptive chromosomal location, disease locus association was determined by comparison with the Morbid Map, derived from Online Mendelian Inheritance in Man (Online Mendelian Inheritance in Man, OMIM™, McKusick-Nathans Institute for Genetic Medicine, Johns Hopkins University (Baltimore, MD) and National Center for Biotechnology Information, National Library of Medicine (Bethesda, MD) 2000. World Wide Web URL: <http://www.ncbi.nlm.nih.gov/omim/>). If the putative chromosomal location of the Query overlapped with the chromosomal location of a Morbid Map entry, the OMIM reference identification number of the morbid map entry is provided in Table 4, column 3, labelled "OMIM ID." A key to the OMIM reference identification numbers is provided in Table 6.

Table 5 provides a key to the Library Code disclosed in Table 3. Column 1 provides the Library Code disclosed in Table 3, column 2. Column 2 provides a description of the tissue or cell source from which the corresponding library was derived.

Table 6 provides a key to the OMIM reference identification numbers disclosed in Table 4, column 3. OMIM reference identification numbers (Column 1) were derived from Online Mendelian Inheritance in Man (Online Mendelian Inheritance in Man, OMIM, McKusick-Nathans Institute for Genetic Medicine, Johns Hopkins University (Baltimore, MD) and National Center for Biotechnology Information, National Library of Medicine, (Bethesda, MD) 2000. World Wide Web URL: <http://www.ncbi.nlm.nih.gov/omim/>). Column 2 provides diseases associated

with the cytologic band disclosed in Table 4, column 2, as determined using the Morbid Map database.

Table 5

Library Code	Library Description
	Morton Fetal
H0002	Human Adult Heart
H0004	Human Adult Spleen
H0007	Human Cerebellum
H0008	Whole 6 Week Old Embryo
H0009	Human Fetal Brain
H0011	Human Fetal Kidney
H0012	Human Fetal Kidney
H0013	Human 8 Week Whole Embryo
H0014	Human Gall Bladder
H0015	Human Gall Bladder, fraction II
H0019	Human Fetal Heart
H0022	Jurkat Cells
H0023	Human fetal lung
H0024	Human Fetal Lung III
H0026	Namalwa Cells
H0030	Human Placenta
H0031	Human Placenta
H0032	Human Prostate
H0036	Human Adult Small Intestine
H0037	Human Adult Small Intestine
H0038	Human Testes
H0039	Human Pancreas Tumor
H0040	Human Testes Tumor
H0041	Human Fetal Bone
H0042	Human Adult Pulmonary
H0044	Human Cornea
H0045	Human Esophagus, Cancer
H0046	Human Endometrial Tumor
H0048	Human Pineal Gland
H0050	Human Fetal Heart
H0051	Human Hippocampus
H0052	Human Cerebellum
H0056	Human Umbilical Vein, Endo. remake
H0057	Human Fetal Spleen
H0059	Human Uterine Cancer
H0063	Human Thymus
H0068	Human Skin Tumor
H0069	Human Activated T-Cells
H0071	Human Infant Adrenal Gland
H0074	Human Platelets
H0081	Human Fetal Epithelium (Skin)
H0083	HUMAN JURKAT MEMBRANE BOUND POLYSOMES
H0085	Human Colon
H0086	Human epithelioid sarcoma

H0087	Human Thymus
H0090	Human T-Cell Lymphoma
H0097	Human Adult Heart, subtracted
H0098	Human Adult Liver, subtracted
H0100	Human Whole Six Week Old Embryo
H0101	Human 7 Weeks Old Embryo, subtracted
H0102	Human Whole 6 Week Old Embryo (II), sub
H0105	Human Fetal Heart, subtracted
H0107	Human Infant Adrenal Gland, subtracted
H0108	Human Adult Lymph Node, subtracted
H0116	Human Thymus Tumor, subtracted
H0119	Human Pediatric Kidney
H0122	Human Adult Skeletal Muscle
H0123	Human Fetal Dura Mater
H0124	Human Rhabdomyosarcoma
H0125	Cem cells cyclohexamide treated
H0130	LNCAP untreated
H0131	LNCAP + 0.3nM R1881
H0132	LNCAP + 30nM R1881
H0134	Raji Cells, cyclohexamide treated
H0135	Human Synovial Sarcoma
H0136	Supt Cells, cyclohexamide treated
H0144	Nine Week Old Early Stage Human
H0147	Human Adult Liver
H0150	Human Epididymus
H0153	Human adult lymph node, subtracted
H0156	Human Adrenal Gland Tumor
H0159	Activated T-Cells, 8 hrs., ligation 2
H0163	Human Synovium
H0165	Human Prostate Cancer, Stage B2
H0166	Human Prostate Cancer, Stage B2 fraction
H0169	Human Prostate Cancer, Stage C fraction
H0170	12 Week Old Early Stage Human
H0171	12 Week Old Early Stage Human, II
H0173	Human Cardiomyopathy, RNA remake
H0176	CAMA1Ee Cell Line
H0177	CAMA1Ee Cell Line
H0178	Human Fetal Brain
H0179	Human Neutrophil
H0181	Human Primary Breast Cancer
H0182	Human Primary Breast Cancer
H0183	Human Colon Cancer
H0184	Human Colon Cancer, metastasized to live
H0186	Activated T-Cell
H0187	Resting T-Cell
H0188	Human Normal Breast
H0194	Human Cerebellum, subtracted
H0196	Human Cardiomyopathy, subtracted
H0197	Human Fetal Liver, subtracted

H0200	Human Greater Omentum, fract II remake,
H0201	Human Hippocampus, subtracted
H0204	Human Colon Cancer, subtracted
H0205	Human Colon Cancer, differential
H0207	LNCAP, differential expression
H0208	Early Stage Human Lung, subtracted
H0212	Human Prostate, subtracted
H0213	Human Pituitary, subtracted
H0214	Raji cells, cyclohexamide treated, subtracted
H0216	Supt cells, cyclohexamide treated, subtracted
H0222	Activated T-Cells, 8 hrs, subtracted
H0225	Activated T-Cells, 12hrs, differentially expressed
H0231	Human Colon, subtraction
H0232	Human Colon, differential expression
H0234	human colon cancer, metastatic to liver, differentially expressed
H0235	Human colon cancer, metatized to liver, subtraction
H0238	Human Myometrium Leiomyoma
H0239	Human Kidney Tumor
H0242	Human Fetal Heart, Differential (Fetal-Specific)
H0244	Human 8 Week Whole Embryo, subtracted
H0247	Human Membrane Bound Polysomes- Enzyme Subtraction
H0250	Human Activated Monocytes
H0251	Human Chondrosarcoma
H0252	Human Osteosarcoma
H0253	Human adult testis, large inserts
H0254	Breast Lymph node cDNA library
H0255	breast lymph node CDNA library
H0257	HL-60, PMA 4H
H0261	H. cerebellum, Enzyme subtracted
H0263	human colon cancer
H0264	human tonsils
H0265	Activated T-Cell (12hs)/Thiouridine labelledEco
H0266	Human Microvascular Endothelial Cells, fract. A
H0267	Human Microvascular Endothelial Cells, fract. B
H0268	Human Umbilical Vein Endothelial Cells, fract. A
H0269	Human Umbilical Vein Endothelial Cells, fract. B
H0271	Human Neutrophil, Activated
H0272	HUMAN TONSILS, FRACTION 2
H0274	Human Adult Spleen, fractionII
H0284	Human OB MG63 control fraction I
H0286	Human OB MG63 treated (10 nM E2) fraction I
H0288	Human OB HOS control fraction I
H0290	Human OB HOS treated (1 nM E2) fraction I
H0292	Human OB HOS treated (10 nM E2) fraction I
H0294	Amniotic Cells - TNF induced
H0295	Amniotic Cells - Primary Culture
H0298	HCBB's differential consolidation
H0305	CD34 positive cells (Cord Blood)
H0306	CD34 depleted Buffy Coat (Cord Blood)

H0309	Human Chronic Synovitis
H0313	human pleural cancer
H0316	HUMAN STOMACH
H0318	HUMAN B CELL LYMPHOMA
H0320	Human frontal cortex
H0321	HUMAN SCHWANOMA
H0327	human corpus colosum
H0328	human ovarian cancer
H0329	Dermatofibrosarcoma Protuberance
H0331	Hepatocellular Tumor
H0333	Hemangiopericytoma
H0334	Kidney cancer
H0340	Corpus Callosum
H0341	Bone Marrow Cell Line (RS4,11)
H0343	stomach cancer (human)
H0345	SKIN
H0351	Glioblastoma
H0352	wilm's tumor
H0354	Human Leukocytes
H0355	Human Liver
H0356	Human Kidney
H0359	KMH2 cell line
H0361	Human rejected kidney
H0369	H. Atrophic Endometrium
H0370	H. Lymph node breast Cancer
H0372	Human Testes
H0373	Human Heart
H0374	Human Brain
H0375	Human Lung
H0376	Human Spleen
H0379	Human Tongue, frac 1
H0380	Human Tongue, frac 2
H0381	Bone Cancer
H0383	Human Prostate BPH, re-excision
H0384	Brain, Kozak
H0386	Leukocyte and Lung, 4 screens
H0390	Human Amygdala Depression, re-excision
H0391	H. Meningioma, M6
H0392	H. Meningioma, M1
H0393	Fetal Liver, subtraction II
H0395	A1-CELL LINE
H0399	Human Kidney Cortex, re-rescue
H0402	CD34 depleted Buffy Coat (Cord Blood), re-excision
H0403	H. Umbilical Vein Endothelial Cells, IL4 induced
H0408	Human kidney Cortex, subtracted
H0411	H Female Bladder, Adult
H0412	Human umbilical vein endothelial cells, IL-4 induced
H0413	Human Umbilical Vein Endothelial Cells, uninduced
H0415	H. Ovarian Tumor, II, OV5232

H0416	Human Neutrophils, Activated, re-excision
H0419	Bone Cancer, re-excision
H0421	Human Bone Marrow, re-excision
H0422	T-Cell PHA 16 hrs
H0423	T-Cell PHA 24 hrs
H0424	Human Pituitary, subt IX
H0427	Human Adipose
H0428	Human Ovary
H0431	H. Kidney Medulla, re-excision
H0433	Human Umbilical Vein Endothelial cells, frac B, re-excision
H0435	Ovarian Tumor 10-3-95
H0436	Resting T-Cell Library,II
H0437	H Umbilical Vein Endothelial Cells, frac A, re-excision
H0438	H. Whole Brain #2, re-excision

T0060	Human White Adipose
T0067	Human Thyroid
T0068	Normal Ovary, Premenopausal
T0069	Human Uterus, normal
T0071	Human Bone Marrow
T0074	Human Adult Retina
T0079	Human Kidney, normal Adult
T0082	Human Adult Retina
T0103	Human colon carcinoma (HCC) cell line
T0104	HCC cell line metastasis to liver
T0109	Human (HCC) cell line liver (mouse) metastasis, remake

T0110	Human colon carcinoma (HCC) cell line, remake
T0114	Human (Caco-2) cell line, adenocarcinoma, colon, remake
T0115	Human Colon Carcinoma (HCC) cell line

Table 6

OMIM ID	OMIM Description
100650	Alcohol intolerance, acute (3) ?Fetal alcohol syndrome (1)
100690	Myasthenic syndrome, slow-channel congenital, 601462 (3)
100710	Myasthenic syndrome, slow-channel congenital, 601462 (3)
100730	Myasthenia gravis, neonatal transient (2)
101000	Malignant mesothelioma, sporadic (3) Meningioma, NF2-related, sporadic (3) Schwannoma, sporadic (3) Neurofibromatosis, type 2 (3) Neurolemmomatosis (3)
102200	Somatotrophinoma (2)
102540	Cardiomyopathy, idiopathic dilated (3)
102578	Leukemia, acute promyelocytic, PML/RARA type (3)
102600	Urolithiasis, 2,8-dihydroxyadenine (3)
102770	Myoadenylate deaminase deficiency (3)
102772	[AMP deaminase deficiency, erythrocytic] (3)
103000	Hemolytic anemia due to adenylate kinase deficiency (3)
103050	Adenylosuccinase deficiency (1) Autism, succinylpurinemic (3)
103581	Albright hereditary osteodystrophy-2 (2) (?)
103600	Analbuminemia (3) [Dysalbuminemic hyperthyroxinemia] (3) [Dysalbuminemic hyperzincemia], 194470 (3)
103720	Alcoholism, susceptibility to (1)
103850	Aldolase A deficiency (3)
103950	Emphysema due to alpha-2-macroglobulin deficiency (1)
104150	[AFP deficiency, congenital] (1) [Hereditary persistence of alpha-fetoprotein] (3)
104311	Alzheimer disease-3 (3)
104500	Amelogenesis imperfecta-2, hypoplastic local type (2)
104614	Cystinuria, 220100 (3)
104770	?Amyloidosis, secondary, susceptibility to (1)
105580	Anal canal carcinoma (2) (?)
105600	Dyserythropoietic anemia, congenital, type III (2)
106100	Angioedema, hereditary (3)
106150	Hypertension, essential, susceptibility to (3) Preeclampsia, susceptibility to (3)
106165	Hypertension, essential, 145500 (3)
106180	Myocardial infarction, susceptibility to (3)
106210	Aniridia (3) Cataract, congenital, with late-onset corneal dystrophy (3) Foveal hypoplasia, isolated, 136520 (3) Peters anomaly (3)
106300	Ankylosing spondylitis (2)
107250	Anterior segment mesenchymal dysgenesis (2)
107271	CD59 deficiency (3)
107280	Alpha-1-antichymotrypsin deficiency (3) Cerebrovascular disease, occlusive (3)

107300	Antithrombin III deficiency (3)
107400	Emphysema (3) Emphysema-cirrhosis (3)
107470	Atypical mycobacterial infection, familial disseminated, 209950 (3) BCG infection, generalized familial (3) Tuberculosis, susceptibility to (3)
107670	Apolipoprotein A-II deficiency (3)
107680	Amyloidosis, 3 or more types (3) ApoA-I and apoC-III deficiency, combined (3) Corneal clouding, autosomal recessive (3) Hypertriglyceridemia, one form (3) Hypoalphalipoproteinemia (3)
107720	Hypertriglyceridemia (3)
107730	Abetalipoproteinemia (3) Apolipoprotein B-100, ligand-defective (3) Hyperbetalipoproteinemia (3) Hypobetalipoproteinemia (3)
107741	Hyperlipoproteinemia, type III (3)
107776	Colton blood group, 110450 (3)
107777	Diabetes insipidus, nephrogenic, autosomal recessive, 222000 (3)
107910	Gynecomastia, familial, due to increased aromatase activity (1) Virilization, maternal and fetal, from placental aromatase deficiency (3)
107970	Arrhythmogenic right ventricular dysplasia-1 (2)
108120	Distal arthrogyrosis-1 (2)
108725	Atherosclerosis, susceptibility to (2)
108730	Brody myopathy, 601003 (3)
108800	Atrial septal defect, secundum type (2)
108962	Hypertension, salt-resistant (1) (?)
108985	Atrophia areata (2)
109150	Machado-Joseph disease (3)
109270	Hemolytic anemia due to band 3 defect (3) Renal tubular acidosis, distal, 179800 (3) Spherocytosis, hereditary (3) [Acanthocytosis, one form] (1) [Elliptocytosis, Malaysian-Melanesian type] (3)
109400	Basal cell nevus syndrome (2)
109543	Leukemia, chronic lymphocytic, B-cell (2)
109560	Leukemia/lymphoma, B-cell, 3 (2)
109690	Asthma, nocturnal, susceptibility to (3) Obesity, susceptibility to (3)
109700	Hemodialysis-related amyloidosis (1)
110100	Blepharophimosis, epicanthus inversus, and ptosis, type I (2)
110700	Vivax malaria, susceptibility to (1)
112250	Bone dysplasia with medullary fibrosarcoma (2)
112261	Fibrodysplasia ossificans progressiva (1) (?)
112262	Fibrodysplasia ossificans progressiva, 135100 (1) (?)
112410	Hypertension with brachydactyly (2)
113100	Brachydactyly, type C (2)
113300	Brachydactyly type E (2) (?)
113520	Hyperleucinemia-isoleucinemia or hypervalinemia (1) (?)

113705	Breast cancer-1 (3) Ovarian cancer (3)
113721	Breast cancer (1)
113900	Heart block, progressive familial, type I (2)
114130	Osteoporosis (3)
114208	Hypokalemic periodic paralysis, 170400 (3) Malignant hyperthermia susceptibility 5, 601887 (3)
114240	Muscular dystrophy, limb-girdle, type 2A, 253600 (3)
114290	Campomelic dysplasia with autosomal sex reversal (3)
114350	Leukemia, acute myeloid (2)
114400	Lynch cancer family syndrome II (2) (?)
114550	Hepatocellular carcinoma (1)
114835	Monocyte carboxyesterase deficiency (1) (?)
115500	Acatalasemia (3)
115650	Cataract, anterior polar-1 (2) (?)
115660	Cataract, cerulean, type 1 (2)
116600	Cataract, posterior polar (2)
116800	Cataract, Marner type (2)
116806	Colorectal cancer (3)
116860	Cavernous angiomatous malformations (2)
117700	Hemosiderosis, systemic, due to aceruloplasminemia (3) [Hypoceruloplasminemia, hereditary] (1)
118210	Charcot-Marie-Tooth neuropathy-2A (2)
118425	Myotonia congenita, dominant, 160800 (3) Myotonia congenita, recessive, 255700 (3) Myotonia levior, recessive (3)
118470	[CETP deficiency] (3)
118485	Polycystic ovary syndrome with hyperandrogenemia (2)
118504	Epilepsy, benign neonatal, type 1, 121200 (3) Epilepsy, nocturnal frontal lobe, 600513 (3)
118511	Schizophrenia, neurophysiologic defect in (2)
118800	Choreoathetosis, familial paroxysmal (2)
119300	van der Woude syndrome (2)
120070	Alport syndrome, autosomal recessive, 203780 (3)
120110	Metaphyseal chondrodysplasia, Schmid type (3)
120120	Epidermolysis bullosa dystrophica, dominant, 131750 (3) Epidermolysis bullosa dystrophica, recessive, 226600 (3) Epidermolysis bullosa, pretibial, 131850 (3)
120131	Alport syndrome, autosomal recessive, 203780 (3) Hematuria, familial benign (3)
120140	Achondrogenesis-hypochondrogenesis, type II (3) Kniest dysplasia (3) Osteoarthritis, precocious (3) SED congenita (3) SMED Strudwick type (3) Stickler syndrome, type I (3) Wagner syndrome, type II (3)
120150	Ehlers-Danlos syndrome, type VIIA1, 130060 (3) Osteogenesis imperfecta, 4 clinical forms, 166200, 166210, 259420, 166220 (3)

	Osteoporosis, idiopathic, 166710 (3)
120160	Ehlers-Danlos syndrome, type VIIA2, 130060 (3) Marfan syndrome, atypical (3) Osteogenesis imperfecta, 4 clinical forms, 166200, 166210, 259420, 166220 (3) Osteoporosis, idiopathic, 166710 (3)
120180	Aneurysm, familial, 100070 (3) Ehlers-Danlos syndrome, type III (3) Ehlers-Danlos syndrome, type IV, 130050 (3) Fibromuscular dysplasia of arteries, 135580 (3)
120190	Ehlers-Danlos syndrome, type I, 130000 (3)
120215	Ehlers-Danlos syndrome, type I, 130000 (3) Ehlers-Danlos syndrome, type II, 130010 (3)
120220	Bethlem myopathy, 158810 (3)
120240	Bethlem myopathy, 158810 (3)
120250	Bethlem myopathy, 158810 (3)
120260	Epiphyseal dysplasia, multiple, type 2, 600204 (3)
120280	Marshall syndrome, 154780 (3) Stickler syndrome, type III (3)
120290	OSMED syndrome, 215150 (3) Stickler syndrome, type II, 184840 (3)
120435	Colorectal cancer, hereditary, nonpolyposis, type 1 (3) Ovarian cancer (3) Muir-Torre syndrome, 158320 (3)
120436	Colorectal cancer, hereditary nonpolyposis, type 2 (3) Muir-Torre family cancer syndrome, 158320 (3) Turcot syndrome with glioblastoma, 276300 (3)
120470	Colorectal cancer (3)
120550	C1q deficiency, type A (3)
120570	C1q deficiency, type B (3)
120575	C1q deficiency, type C (3)
120580	C1r/C1s deficiency, combined (1)
120620	CR1 deficiency (1) ?SLE susceptibility (1)
120700	C3 deficiency (3)
120810	C4 deficiency (3)
120820	C4 deficiency (3)
120900	C5 deficiency (1)
120920	Measles, susceptibility to (1)
120940	C9 deficiency (3)
120950	C8 deficiency, type I (2)
120960	C8 deficiency, type II (3)
121011	Deafness, autosomal dominant 3, 601544 (3) Deafness, autosomal recessive 1, 220290 (3)
121014	Heterotaxia, viscerotaxial, autosomal recessive (3)
121050	Contractural arachnodactyly, congenital (3)
121300	Coproporphyrinuria (3) Harderoporphyria (3)
121360	Myeloid leukemia, acute, M4Eo subtype (2)
121700	Congenital hereditary endothelial dystrophy of cornea (2)
121800	Corneal dystrophy, crystalline, Schnyder (2)

122000	Corneal dystrophy, posterior polymorphous (2)
122500	[Transcortin deficiency] (1)
122560	ACTH deficiency, 201400 (2)
122720	Coumarin resistance, 122700 (3) Nicotine addiction, protection from (3)
123000	Cranio metaphyseal dysplasia (2)
123101	Craniosynostosis, type 2 (3)
123580	Cataract, congenital, autosomal dominant (3)
123620	Cataract, cerulean, type 2, 601547 (3)
123660	Cataract, Coppock-like (3)
123829	Melanoma (3)
123940	White sponge nevus, 193900 (3)
124030	Debrisoquine sensitivity (3) ?Parkinsonism, susceptibility to (1)
124080	CMO II deficiency (3)
124200	Darier disease (keratosis follicularis) (2)
125270	Porphyria, acute hepatic (3) Lead poisoning, susceptibility to (3)
125490	Dentinogenesis imperfecta-1 (2)
125660	Cardiomyopathy (1) (?) Myopathy, desminopathic (1) (?)
125852	Insulin-dependent diabetes mellitus-2 (2)
126060	Anemia, megaloblastic, due to DHFR deficiency (1) (?)
126090	Hyperphenylalaninemia due to pterin-4a-carbinolamine dehydratase deficiency, 264070 (3)
126150	Diphtheria, susceptibility to (1)
126337	Myxoid liposarcoma (3)
126340	Xeroderma pigmentosum, group D, 278730 (3)
126391	DNA ligase I deficiency (3)
126451	?Schizophrenia, susceptibility to (2)
126452	Autonomic nervous system dysfunction (3) [Novelty seeking personality] (1)
126600	Drusen, radial, autosomal dominant (2)
126650	Chloride diarrhea, congenital, Finnish type, 214700 (3) Colon cancer (1) (?)
128100	Dystonia-1, torsion (3)
129010	Neuropathy, congenital hypomyelinating, 1 (3)
129490	Ectodermal dysplasia-3, anhidrotic (2)
129500	Ectodermal dysplasia, hidrotic (2)
129900	EEC syndrome-1 (2) (?)
130160	Cutis laxa, 123700 (3) Supravalvar aortic stenosis, 185500 (3) Williams-Beuren syndrome, 194050 (3)
130410	Glutaric aciduria, type IIB (3)
130500	Elliptocytosis-1 (3)
130650	Beckwith-Wiedemann syndrome (2)
131100	Carcinoid tumor of lung (3) Multiple endocrine neoplasia I (3) Prolactinoma, hyperparathyroidism, carcinoid syndrome (2)

131195	Hereditary hemorrhagic telangiectasia-1, 187300 (3)
131210	Atherosclerosis, susceptibility to (2)
131242	Shah-Waardenburg syndrome, 277580 (3)
131400	Eosinophilia, familial (2)
131440	Eosinophilic myeloproliferative disorder (2) (?)
132700	Cylindromatosis (2)
132800	Basal cell carcinoma (2) (?) Epithelioma, self-healing, squamous 1, Ferguson-Smith type (2)
133170	Erythremia (1) (?)
133171	[Erythrocytosis, familial], 133100 (3)
133200	Erythrokeratoderma variabilis (2)
133510	Trichothiodystrophy (3) Xeroderma pigmentosum, group B (3)
133530	Xeroderma pigmentosum, group G, 278780 (3)
133540	Cockayne syndrome-2, late onset (2)
133700	Chondrosarcoma, 215300 (3) Exostoses, multiple, type 1 (3)
133701	Exostoses, multiple, type 2 (3)
133780	Vitreoretinopathy, exudative, familial (2)
134370	Factor H deficiency (1) Hemolytic-uremic syndrome, 235400 (3) Membroproliferative glomerulonephritis (1)
134580	Factor XIIIB deficiency (3)
134638	Systemic lupus erythematosus, susceptibility, 152700 (3)
134790	Hyperferritinemia-cataract syndrome, 600886 (3)
134797	Ectopia lentis, ?isolated (3) Marfan syndrome, 154700 (3) Shprintzen-Goldberg syndrome, 182212 (3)
134820	Amyloidosis, hereditary renal, 105200 (3) Dysfibrinogenemia, alpha type, causing bleeding diathesis (3) Dysfibrinogenemia, alpha type, causing recurrent thrombosis (3)
134830	Dysfibrinogenemia, beta type (3)
134850	Dysfibrinogenemia, gamma type (3) Hypofibrinogenemia, gamma type (3)
134934	Achondroplasia, 100800 (3) Craniosynostosis, nonsyndromic (3) Crouzon syndrome with acanthosis nigricans (3) Hypochondroplasia, 146000 (3) Thanatophoric dysplasia, types I and II, 187600 (3)
135300	Fibromatosis, gingival (2)
135600	Ehlers-Danlos syndrome, type X (1) (?)
135700	Fibrosis of extraocular muscles, congenital, 1 (2)
135750	Tetramelic mirror-image polydactyly (2) (?)
135940	Ichthyosis vulgaris, 146700 (1) (?)
136132	[Fish-odor syndrome], 602079 (3)
136350	Pfeiffer syndrome, 101600 (3)
136435	Ovarian dysgenesis, hypergonadotropic, with normal karyotype, 233300 (3)
136440	Lymphoma/leukemia, B-cell, variant (1)
136530	Male infertility, familial (1) (?)
136550	Macular dystrophy, North Carolina type (2)

136836	Fucosyltransferase-6 deficiency (3)
136850	Fumarase deficiency (3)
137181	[Gamma-glutamyltransferase, familial high serum] (2)
137350	Amyloidosis, Finnish type, 105120 (3)
137600	Iridogoniodysgenesis syndrome (2)
138030	[?Hyperproglucagonemia] (1)
138033	Diabetes mellitus, type II (3)
138040	Cortisol resistance (3)
138079	Hyperinsulinism, familial, 602485 (3) MODY, type 2, 125851 (3)
138140	Glucose transport defect, blood-brain barrier (3)
138190	Diabetes mellitus, noninsulin-dependent (3)
138320	Hemolytic anemia due to glutathione peroxidase deficiency (1)
138430	Diabetes mellitus, type II (3)
138491	Hyperekplexia and spastic paraparesis (3) Startle disease, autosomal recessive (3) Startle disease/hyperekplexia, autosomal dominant, 149400 (3)
138570	Non-insulin dependent diabetes mellitus, susceptibility to (2)
138571	Glycogen synthase, liver, deficiency of, 240600 (1)
138700	[Apolipoprotein H deficiency] (3)
138720	Bernard-Soulier syndrome, type B (2)
138850	Hypogonadotropic hypogonadism (3)
138971	Kostmann neutropenia, 202700 (3)
138981	Pulmonary alveolar proteinosis, 265120 (3)
139130	Hypertension, essential, susceptibility to, 145500 (3)
139150	Basal cell carcinoma (3)
139190	Gigantism due to GHRF hypersecretion (1) Isolated growth hormone deficiency due to defect in GHRF (1) (?)
139191	Growth hormone deficient dwarfism (3)
139250	Isolated growth hormone deficiency, Illig type with absent GH and Kowarski type with bioinactive GH (3)
139320	McCune-Albright polyostotic fibrous dysplasia, 174800 (3) Pituitary ACTH secreting adenoma (3) Pseudohypoparathyroidism, type Ia, 103580 (3) Somatotrophinoma (3)
139330	Night blindness, congenital stationary (3)
139350	Epidermolytic hyperkeratosis, 113800 (3) Keratoderma, palmoplantar, nonepidermolytic (3)
139360	Pituitary ACTH-secreting adenoma (3)
140100	[Anhaptoglobinemia] (3) [Hypohaptoglobinemia] (3)
141750	Alpha-thalassemia/mental retardation syndrome, type I (1)
141800	Erythremias, alpha- (3) Heinz body anemias, alpha- (3) Methemoglobinemias, alpha- (3) Thalassemias, alpha- (3)
141850	Erythrocytosis (3) Heinz body anemia (3) Hemoglobin H disease (3) Hypochromic microcytic anemia (3)

	Thalassemia, alpha- (3)
141900	Erythremias, beta- (3) HPFH, deletion type (3) Heinz body anemias, beta- (3) Methemoglobinemias, beta- (3) Sickle cell anemia (3) Thalassemias, beta- (3)
142000	Thalassemia due to Hb Lepore (3) Thalassemia, delta- (3)
142200	HPFH, nondeletion type A (3)
142250	HPFH, nondeletion type G (3)
142270	Hereditary persistence of fetal hemoglobin (3) (?)
142335	Hereditary persistence of fetal hemoglobin, heterocellular, Indian type (2) (?)
142380	Hepatocellular carcinoma (3)
142410	Insulin-dependent diabetes mellitus (3) MODY, type 3, 600496 (3) Non-insulin-dependent diabetes mellitus-2, 601407 (2)
142470	[Hereditary persistence of fetal hemoglobin, heterocellular] (2)
142600	Hemolytic anemia due to hexokinase deficiency (3)
142680	Periodic fever, familial (2)
142857	Pemphigoid, susceptibility to (2)
142858	Beryllium disease, chronic, susceptibility to (3)
142959	Hand-foot-uterus syndrome, 140000 (3)
142989	Synpolydactyly, type II, 186000 (3)
143100	Huntington disease (3)
143200	Erosive vitreoretinopathy (2) Wagner syndrome (2)
143450	Trifunctional protein deficiency, type II (3)
143890	Hypercholesterolemia, familial (3)
144120	Hyperimmunoglobulin G1 syndrome (2) (?)
144200	Epidermolytic palmoplantar keratoderma (3)
144700	Renal cell carcinoma (2)
145001	Hyperparathyroidism-jaw tumor syndrome (2)
145260	Pseudohypoadosteronism, type II (2)
145410	Opitz G syndrome, type II (2)
145505	?Hypertension, essential (1)
145981	Hypocalciuric hypercalcemia, type II (2)
146150	Hypomelanosis of Ito (2) (?)
146200	Hypoparathyroidism, familial (2)
146740	Neutropenia, alloimmune neonatal (3) Viral infections, recurrent (3) Lupus erythematosus, systemic, susceptibility, 152700 (1)
146760	[IgG receptor I, phagocytic, familial deficiency of] (1)
146790	Lupus nephritis, susceptibility to (3)
147020	Agammaglobulinemia, 601495 (3)
147050	Atopy (2)
147061	Allergy and asthma susceptibility (2) (?)
147110	IgG2 deficiency, selective (3)
147141	Leukemia, acute lymphoblastic (1)

147200	[Kappa light chain deficiency] (3)
147440	Growth retardation with deafness and mental retardation (3)
147450	Amyotrophic lateral sclerosis, due to SOD1 deficiency, 105400 (3)
147545	Diabetes mellitus, noninsulin-dependent (3)
147557	Epidermolysis bullosa, junctional, with pyloric atresia, 226730 (3)
147570	Interferon, immune, deficiency (1)
147575	Macrocytic anemia refractory, of 5q- syndrome, 153550 (3) Myelodysplastic syndrome, preleukemic (3) Myelogenous leukemia, acute (3)
147660	Interferon, alpha, deficiency (1)
147670	Diabetes mellitus, insulin-resistant, with acanthosis nigricans (3) Leprechaunism (3) Rabson-Mendenhall syndrome (3)
147680	Severe combined immunodeficiency due to IL2 deficiency (1)
147781	Atopy, susceptibility to (3)
147790	Leukemia, acute lymphocytic, with 4/11 translocation (3) (?)
147791	Jacobsen syndrome (2)
148040	Epidermolysis bullosa simplex, Koebner, Dowling-Meara, and Weber-Cockayne types, 131900, 131760, 131800 (3)
148041	Pachyonychia congenita, Jadassohn-Lewandowsky type, 167200 (3)
148043	Meesmann corneal dystrophy, 122100 (3)
148065	White sponge nevus, 193900 (3)
148066	Epidermolysis bullosa simplex, Koebner, Dowling-Meara, and Weber-Cockayne types, 131900, 131760, 131800 (3) Epidermolysis bullosa simplex, recessive, 601001 (3)
148067	Nonepidermolytic palmoplantar keratoderma, 600962 (3) Pachyonychia congenita, Jadassohn-Lewandowsky type, 167200 (3)
148069	Pachyonychia congenita, Jackson-Lawler type, 167210 (3)
148070	?Liver disease, susceptibility to, from hepatotoxins or viruses (1)
148080	Epidermolytic hyperkeratosis, 113800 (3)
148370	Keratolytic winter erythema (2)
148500	Tylosis with esophageal cancer (2)
148900	Klippel-Feil syndrome with laryngeal malformation (2)
150000	Exertional myoglobinuria due to deficiency of LDH-A (3)
150100	Lactate dehydrogenase-B deficiency (3)
150200	[Placental lactogen deficiency] (1)
150210	Lactoferrin-deficient neutrophils, 245480 (1) (?)
150230	Langer-Giedion syndrome (2)
150240	Cutis laxa, marfanoid neonatal type (1) (?)
150250	Larsen syndrome, autosomal dominant (2)
150270	Laryngeal adductor paralysis (2) (?)
150292	Epidermolysis bullosa, Herlitz junctional type, 226700 (3)
150310	Epidermolysis bullosa, Herlitz junctional type, 226700 (3) Epidermolysis bullosa, generalized atrophic benign, 226650 (3)
151385	Leukemia, acute myeloid (3)
151390	Leukemia, acute T-cell (2)
151400	Leukemia/lymphoma, B-cell, 1 (2)
151430	Leukemia/lymphoma, B-cell, 2 (2)
151440	Leukemia, T-cell acute lymphoblastoid (2)

151670	Hepatic lipase deficiency (3)
152200	Coronary artery disease, susceptibility to (1)
152427	Long QT syndrome-2 (3)
152445	Erythrokeratoderma, progressive symmetric, 602036 (3) Vohwinkel syndrome, 124500 (3)
152760	Hypogonadotropic hypogonadism due to GNRH deficiency, 227200 (1) (?)
152780	Hypogonadism, hypergonadotropic (3) Male pseudohermaphroditism due to defective LH (1) (?)
152790	Leydig cell hypoplasia (3) Precocious puberty, male, 176410 (3)
153455	Cutis laxa, recessive, type I, 219100 (1)
153700	Macular dystrophy, vitelliform type (3)
153880	Macular dystrophy, dominant cystoid (2)
153900	Stargardt disease-2 (2)
154275	Malignant hyperthermia susceptibility 2 (2)
154276	Malignant hyperthermia susceptibility 3 (2)
154500	Treacher Collins mandibulofacial dysostosis (3)
154545	Chronic infections, due to opsonin defect (3)
154550	Carbohydrate-deficient glycoprotein syndrome, type Ib, 602579 (3)
154705	Marfan syndrome, type II (2)
155555	[Red hair/fair skin] (3) UV-induced skin damage, vulnerability to (3)
155600	Malignant melanoma, cutaneous (2)
155900	Melkersson-Rosenthal syndrome (2) (?)
156225	Muscular dystrophy, congenital merosin-deficient (3)
156232	Mesomelic dysplasia, Kantaputra type (2)
156490	Neuroblastoma (3)
156570	Methylcobalamin deficiency, cbl G type (3)
156600	Microcoria, congenital (2)
156845	Tietz syndrome, 103500 (3) Waardenburg syndrome, type IIA, 193510 (3) Waardenburg syndrome/ocular albinism, digenic, 103470 (3)
156850	Cataract, congenital, with microphthalmia (2)
157140	Dementia, frontotemporal, with parkinsonism, 601630 (3)
157147	Abetalipoproteinemia, 200100 (3)
157170	Holoprosencephaly-2 (2)
157640	PEO with mitochondrial DNA deletions, type I (2)
157655	Lactic acidosis due to defect in iron-sulfur cluster of complex I (1)
157900	Moebius syndrome (2) (?)
158590	Spinal muscular atrophy-4 (2)
158900	Facioscapulohumeral muscular dystrophy-1A (2)
159000	Muscular dystrophy, limb-girdle, type 1A (2)
159001	Muscular dystrophy, limb-girdle, type 1B (2)
159350	Colorectal cancer (3)
159440	Charcot-Marie-Tooth neuropathy-1B, 118200 (3) Dejerine-Sottas disease, myelin P(0)-related, 145900 (3) Hypomyelination, congenital (3)
159555	Leukemia, myeloid/lymphoid or mixed-lineage (2)
159595	Leukemia, transient, of Down syndrome (2)

160760	Cardiomyopathy, familial hypertrophic, 1, 192600 (3) Central core disease, one form (3) (?)
160777	Griscelli disease, 214450 (3)
160781	Cardiomyopathy, hypertrophic, mid-left ventricular chamber type (3)
160900	Myotonic dystrophy (3)
160980	Carney myxoma-endocrine complex (2)
161015	Mitochondrial complex I deficiency, 252010 (1) (?)
162100	Neuralgic amyotrophy with predilection for brachial plexus (2)
162150	Obesity with impaired prohormone processing, 600955 (3)
162400	Neuropathy, hereditary sensory and autonomic, type 1 (2)
163729	Hypertension, pregnancy-induced (2)
163890	Parkinson disease, type 1, 601508 (3)
163950	Cardiofaciocutaneous syndrome, 115150 (2) Noonan syndrome-1 (2)
164009	Leukemia, acute promyelocytic, NUPA/RARA type (3)
164040	Leukemia, acute promyelocytic, NPM/RARA type (3)
164050	Nucleoside phosphorylase deficiency, immunodeficiency due to (3)
164160	Obesity, severe, due to leptin deficiency (3)
164200	Oculodentodigital dysplasia (2) Syndactyly, type III, 186100 (2)
164500	Spinocerebellar ataxia-7 (3)
164731	Ovarian carcinoma, 167000 (2)
164761	Hirschsprung disease, 142623 (3) Medullary thyroid carcinoma, 155240 (3) Multiple endocrine neoplasia IIA, 171400 (3) Multiple endocrine neoplasia IIB, 162300 (3)
164770	Myeloid malignancy, predisposition to (3)
164790	Colorectal cancer (3)
164860	Renal cell carcinoma, papillary, familial and sporadic (3)
164920	Mast cell leukemia (3) Mastocytosis with associated hematologic disorder (3) Piebaldism (3)
164953	Liposarcoma (1)
165215	3q21q26 syndrome (1)
165240	Greig cephalopolysyndactyly syndrome, 175700 (3) Pallister-Hall syndrome, 146510 (3) Postaxial polydactyly type A1, 174200 (3)
165320	Hepatocellular carcinoma (1) (?)
166600	Osteopetrosis, AD, type II (2)
166800	Otosclerosis (2)
167000	Ovarian cancer, serous (2)
167250	Paget disease of bone (2) (?)
167409	Optic nerve coloboma with renal disease, 120330 (3)
167415	Hypothyroidism, congenital, due to thyroid dysgenesis or hypoplasia (3)
168000	Paraganglioma, familial nonchromaffin, 1 (2)
168360	Paraneoplastic sensory neuropathy (1)
168450	Hypoparathyroidism, autosomal dominant (3) Hypoparathyroidism, autosomal recessive (3)
168461	Centrocytic lymphoma (2) Multiple myeloma, 254250 (2)

	Parathyroid adenomatosis 1 (2)
168468	Metaphyseal chondrodysplasia, Murk Jansen type, 156400 (3)
168470	Humoral hypercalcemia of malignancy (1) (?)
168500	Parietal foramina (2)
168610	Parkinsonism-dementia with pallidopontonigral degeneration (2)
169600	Hailey-Hailey disease (2)
170261	Bare lymphocyte syndrome, type I, due to TAP2 deficiency (1)
170500	Hyperkalemic periodic paralysis (3) Myotonia congenita, atypical acetazolamide-responsive (3) Paramyotonia congenita, 168300 (3)
170650	Periodontitis, juvenile (2)
170993	Zellweger syndrome-3 (3)
170995	Zellweger syndrome-2 (3)
171050	Colchicine resistance (3)
171060	Cholestasis, progressive familial intrahepatic, type III, 602347 (3)
171190	Hypertension, essential, 145500 (1) (?)
171650	Lysosomal acid phosphatase deficiency (1) (?)
171760	Hypophosphatasia, adult, 146300 (1) (?) Hypophosphatasia, infantile, 241500 (3)
171860	Hemolytic anemia due to phosphofructokinase deficiency (1)
172400	Hemolytic anemia due to glucosephosphate isomerase deficiency (3) Hydrops fetalis, one form (1)
172411	?Colorectal cancer, resistance to (1)
172471	Glycogenosis, hepatic, autosomal (3)
172490	Phosphorylase kinase deficiency of liver and muscle, 261750 (2) (?)
173360	Hemorrhagic diathesis due to PAI1 deficiency (1) Thrombophilia due to excessive plasminogen activator inhibitor (1)
173370	Plasminogen activator deficiency (1)
173470	Glanzmann thrombasthenia, type B (3)
173510	Platelet glycoprotein IV deficiency (3) [Macrothrombocytopenia] (1)
173610	Platelet alpha/delta storage pool deficiency (1)
173850	Polio, susceptibility to (2)
173870	Fanconi anemia (1) (?) Xeroderma pigmentosum (1) (?)
173910	Polycystic kidney disease, adult, type II (3)
174000	Medullary cystic kidney disease, AD (2)
174810	Osteolysis, familial expansile (2)
174900	Polypsis, juvenile intestinal (2)
175100	Adenomatous polyposis coli (3) Adenomatous polyposis coli, attenuated (3) Colorectal cancer (3) Desmoid disease, hereditary, 135290 (3) Gardner syndrome (3) Turcot syndrome, 276300 (3)
176000	Porphyria, acute intermittent (3)
176010	Porphyria, Chester type (2)
176100	Porphyria cutanea tarda (3) Porphyria, hepatoerythropoietic (3)
176260	Episodic ataxia/myokymia syndrome, 160120 (3)

176261	Jervell and Lange-Nielsen syndrome, 220400 (3)
176300	Amyloid neuropathy, familial, several allelic types (3) Amyloidosis, senile systemic (3) Carpal tunnel syndrome, familial (3) [Dystransthyretinemic hyperthyroxinemia](3)
176310	Leukemia, acute pre-B-cell (2)
176450	Sacral agenesis-1 (2)
176640	Creutzfeldt-Jakob disease, 123400 (3) Gerstmann-Straussler disease, 137440 (3) Insomnia, fatal familial (3)
176705	Breast cancer, sporadic (3)
176730	Diabetes mellitus, rare form (1) Hyperproinsulinemia, familial (3) MODY, one form (3)
176797	Leukemia, acute promyelocytic, PL2F/RARA type (3)
176860	Purpura fulminans, neonatal (1) Thrombophilia due to protein C deficiency (3)
176930	Dysprothrombinemia (3) Hypoprothrombinemia (3)
176943	Apert syndrome, 101200 (3) Beare-Stevenson cutis gyrata syndrome, 123790 (3) Crouzon craniofacial dysostosis, 123500 (3) Jackson-Weiss syndrome, 123150 (3) Pfeiffer syndrome, 101600 (3)
176947	Selective T-cell defect (3)
176960	Pituitary tumor, invasive (3)
177000	Protoporphyrria, erythropoietic (3) Protoporphyrria, erythropoietic, recessive, with liver failure (3)
177070	Hermansky-Pudlak syndrome, 203300 (1) (?) Spherocytosis, hereditary, Japanese type (3)
177900	Psoriasis susceptibility-1 (2)
178300	Ptosis, hereditary congenital, 1 (2)
178600	Pulmonary hypertension, familial primary (2)
178640	Pulmonary alveolar proteinosis, congenital, 265120 (3)
179095	Male infertility (1) (?)
179450	Ragweed sensitivity (2) (?)
179605	Butterfly dystrophy, retinal (3) Macular dystrophy (3) Retinitis pigmentosa, digenic (3) Retinitis pigmentosa-7, peripherin-related (3) Retinitis punctata albescens (3)
179615	Reticulosis, familial histiocytic, 267700 (3) Severe combined immunodeficiency, B cell-negative, 601457 (3)
179616	Severe combined immunodeficiency, B cell-negative, 601457 (3)
179755	Renal cell carcinoma, papillary, 1 (2)
179820	[Hyperproreninemia] (3)
180069	Leber congenital amaurosis-2, 204100 (3) Retinal dystrophy, autosomal recessive, childhood-onset (3) Retinitis pigmentosa-20 (3)
180071	Retinitis pigmentosa, autosomal recessive (3)

180072	Night blindness, congenital stationary, type 3, 163500 (3) Retinitis pigmentosa, autosomal recessive (3)
180090	Retinitis pigmentosa, autosomal recessive (3)
180100	Retinitis pigmentosa-1 (2)
180104	Retinitis pigmentosa-9 (2)
180105	Retinitis pigmentosa-10 (2)
180200	Bladder cancer, 109800 (3) Osteosarcoma, 259500 (2) Pinealoma with bilateral retinoblastoma (2) Retinoblastoma (3)
180240	Leukemia, acute promyelocytic (1)
180250	Retinol binding protein, deficiency of (1) (?)
180297	Anemia, hemolytic, Rh-null, suppressor type, 268150 (3)
180380	Night blindness, congenital stationery, rhodopsin-related (3) Retinitis pigmentosa, autosomal recessive (3) Retinitis pigmentosa-4, autosomal dominant (3)
180381	Oguchi disease-2, 258100 (3)
180385	Leukemia, acute T-cell (2)
180721	Retinitis pigmentosa, digenic (3)
180840	Susceptibility to IDDM (1) (?)
180860	Russell-Silver syndrome (2)
180901	Central core disease, 117000 (3) Malignant hyperthermia susceptibility 1, 145600 (3)
181405	Scapuloperoneal spinal muscular atrophy, New England type (2)
181430	Scapuloperoneal syndrome, myopathic type (2)
181460	Schistosoma mansoni, susceptibility/resistance to (2)
181510	Schizophrenia (2) (?)
181600	Sclerolyosis (2) (?)
182138	Anxiety-related personality traits (3)
182280	Small-cell cancer of lung (2)
182290	Smith-Magenis syndrome (2)
182380	Glucose/galactose malabsorption (3)
182381	Renal glucosuria, 253100 (1) (?)
182452	Lung cancer, small cell (3)
182500	Cataract, congenital (2) (?)
182600	Spastic paraplegia-3A (2)
182601	Spastic paraplegia-4 (3)
182860	Elliptocytosis-2 (3) Pyropoikilocytosis (3) Spherocytosis, recessive (3)
182870	Anemia, neonatal hemolytic, fatal and near-fatal (3) Elliptocytosis-3 (3) Spherocytosis-1 (3)
182900	Spherocytosis-2 (3)
183600	Split hand/foot malformation, type 1 (2)
185000	Stomatocytosis I (1) (?)
185430	Atherosclerosis, susceptibility to (3) (?)
185470	Myopathy due to succinate dehydrogenase deficiency (1) (?)
185800	Symphalangism, proximal (2)

186580	Arthrocutaneous granulomatosis (2)
186740	Immunodeficiency due to defect in CD3-gamma (3)
186770	Leukemia, T-cell acute lymphocytic (2)
186780	CD3, zeta chain, deficiency (1)
186830	Immunodeficiency, T-cell receptor/CD3 complex (3)
186855	Leukemia-2, T-cell acute lymphoblastic (3)
186860	Leukemia/lymphoma, T-cell (2)
186880	Leukemia/lymphoma, T-cell (3)
186921	Leukemia, T-cell acute lymphoblastic (2)
186940	[CD4(+) lymphocyte deficiency] (2) Lupus erythematosus, susceptibility to (2)
186960	Leukemia/lymphoma, T-cell (2)
187040	Leukemia-1, T-cell acute lymphoblastic (3)
188025	Thrombocytopenia, Paris-Trousseau type (2) (?)
188040	Thrombophilia due to thrombomodulin defect (3)
188070	Bleeding disorder due to defective thromboxane A2 receptor (3)
188450	Goiter, adolescent multinodular (1) Goiter, nonendemic, simple (3) Hypothyroidism, hereditary congenital (3)
188540	Hypothyroidism, nongoitrous (3)
188550	Thyroid papillary carcinoma (1)
188826	Sorsby fundus dystrophy, 136900 (3)
189800	Preeclampsia/eclampsia (2) (?)
189980	Leukemia, chronic myeloid (3)
190000	Atransferrinemia (1)
190020	Bladder cancer, 109800 (3)
190040	Dermatofibrosarcoma protuberans (3) Giant-cell fibroblastoma (3) Meningioma, SIS-related (3)
190070	Colorectal adenoma (1) Colorectal cancer (1)
190080	Burkitt lymphoma (3)
190100	Geniospasm (2)
190182	Colon cancer (3) Colorectal cancer, familial nonpolyposis, type 6 (3)
190195	Ichthyosiform erythroderma, congenital, 242100 (3) Ichthyosis, lamellar, autosomal recessive, 242300 (3)
190198	Leukemia, T-cell acute lymphoblastic (2)
190300	Tremor, familial essential, 1 (2)
190350	Trichorhinophalangeal syndrome, type 1 (2)
190450	Hemolytic anemia due to triosephosphate isomerase deficiency (3)
190605	Triphalangeal thumb-polysyndactyly syndrome (2)
190685	Down syndrome (1)
190900	Colorblindness, tritan (3)
191010	Cardiomyopathy, familial hypertrophic, 3, 115196 (3)
191030	Nemaline myopathy-1, 161800 (3)
191044	Cardiomyopathy, familial hypertrophic (3)
191045	Cardiomyopathy, familial hypertrophic, 2, 115195 (3)
191092	Tuberous sclerosis-2 (3)

191100	Tuberous sclerosis-1 (3)
191170	Colorectal cancer, 114500 (3) Li-Fraumeni syndrome (3)
191181	Cervical carcinoma (2)
191290	Segawa syndrome, recessive (3)
191315	Insensitivity to pain, congenital, with anhidrosis, 256800 (3)
191540	[Urate oxidase deficiency] (1)
192090	Breast cancer, lobular (3) Endometrial carcinoma (3) Gastric cancer, familial, 137215 (3) Ovarian carcinoma (3)
192340	Diabetes insipidus, neurohypophyseal, 125700 (3)
192500	Jervell and Lange-Nielsen syndrome, 220400 (3) Long QT syndrome-1 (3)
192974	Glycoprotein Ia deficiency (2) (?) Neonatal alloimmune thrombocytopenia (2)
193235	Vitreoretinopathy, neovascular inflammatory (2)
193300	Renal cell carcinoma (3) von Hippel-Lindau syndrome (3)
193500	Craniofacial-deafness-hand syndrome, 122880 (3) Rhabdomyosarcoma, alveolar, 268220 (3) Waardenburg syndrome, type I (3) Waardenburg syndrome, type III, 148820 (3)
194070	Denys-Drash syndrome (3) Frasier syndrome, 136680 (3) Wilms tumor, type 1 (3)
194071	Adrenocortical carcinoma, hereditary, 202300 (2) Wilms tumor, type 2 (2)
194190	Wolf-Hirschhorn syndrome (2)
200150	Choreoacanthocytosis (2)
200350	Acetyl-CoA carboxylase deficiency (1)
200990	Acrocallosal syndrome (2) (?)
201450	Acyl-CoA dehydrogenase, medium chain, deficiency of (3)
201460	Acyl-CoA dehydrogenase, long chain, deficiency of (3)
201470	Acyl-CoA dehydrogenase, short-chain, deficiency of (3)
201475	VLCAD deficiency (3)
201810	3-beta-hydroxysteroid dehydrogenase, type II, deficiency (3)
201910	Adrenal hyperplasia, congenital, due to 21-hydroxylase deficiency (3)
202010	Adrenal hyperplasia, congenital, due to 11-beta-hydroxylase deficiency (3) Aldosteronism, glucocorticoid-remediable (3)
203100	Albinism, oculocutaneous, type 1A (3) Waardenburg syndrome/ocular albinism, digenic, 103470 (3)
203310	Ocular albinism, autosomal recessive (2) (?)
203500	Alkaptonuria (3)
203740	Alpha-ketoglutarate dehydrogenase deficiency (1)
203750	3-ketothiolase deficiency (3)
203800	Alstrom syndrome (2)
204500	Ceroid-lipofuscinosis, neuronal 2, classic late infantile (2)
205100	Amyotrophic lateral sclerosis, juvenile (2)
205900	Anemia, Diamond-Blackfan (2)

207750	Hyperlipoproteinemia, type Ib (3)
207800	Argininemia (3)
208100	Arthrogryposis multiplex congenita, neurogenic (2)
208250	Jacobs syndrome (2)
208400	Aspartylglucosaminuria (3)
208900	Ataxia-telangiectasia (3) B-cell non-Hodgkin lymphoma, sporadic (3) T-cell prolymphocytic leukemia, sporadic (3)
209900	Bardet-Biedl syndrome 2 (2)
209901	Bardet-Biedl syndrome 1 (2)
210900	Bloom syndrome (3)
211420	Breast cancer, ductal (2)
212138	Carnitine-acylcarnitine translocase deficiency (3)
212200	Carnosinemia (2)
213700	Cerebrotendinous xanthomatosis (3)
214300	Klippel-Feil syndrome (2) (?)
214400	Charcot-Marie-Tooth neuropathy-4A (2)
214500	Chediak-Higashi syndrome (3)
215700	Citrullinemia (3)
216550	Cohen syndrome (2)
216900	Achromatopsia (2)
216950	C1r/C1s deficiency, combined (1)
217000	C2 deficiency (3)
217030	C3b inactivator deficiency (3)
217050	C6 deficiency (1) Combined C6/C7 deficiency (1)
217070	C7 deficiency (1)
217800	Macular corneal dystrophy (2)
218000	Andermann syndrome (2)
218030	Apparent mineralocorticoid excess, hypertension due to (3)
219800	Cystinosis, nephropathic (3)
221770	Polycystic lipomembranous osteodysplasia with sclerosing leukencephalopathy (2)
221820	Gliososis, familial progressive subcortical (2)
222100	Diabetes mellitus, insulin-dependent-1 (2) (?)
222600	Achondrogenesis Ib, 600972 (3) Atelosteogenesis II, 256050 (3) Diastrophic dysplasia (3)
222700	Lysinuric protein intolerance (2)
222745	DECR deficiency (2) (?)
222800	Hemolytic anemia due to bisphosphoglycerate mutase deficiency (1)
222900	Sucrose intolerance (3)
223000	Lactase deficiency, adult, 223100 (1) (?) Lactase deficiency, congenital (1) (?)
223360	Dopamine-beta-hydroxylase deficiency (1)
223900	Dysautonomia, familial (2)
224100	Congenital dyserythropoietic anemia II (2)
224120	Dyserythropoietic anemia, congenital, type I (2)
225500	Ellis-van Creveld syndrome (2)

226450	Epidermolysis bullosa inversa, junctional (2)
227220	[Eye color, brown] (2)
227400	Hemorrhagic diathesis due to factor V deficiency (1) Thromboembolism susceptibility due to factor V Leiden (3)
227500	Factor VII deficiency (3)
227600	Factor X deficiency (3)
227645	Fanconi anemia, type C (3)
227646	Fanconi anemia, type D (2)
227650	Fanconi anemia, type A (3)
229000	Fletcher factor deficiency (1)
229300	Friedreich ataxia (3) Friedreich ataxia with retained reflexes (2)
229600	Fructose intolerance (3)
229700	Fructose-bisphosphatase deficiency (1)
230000	Fucosidosis (3)
230200	Galactokinase deficiency with cataracts (3)
230350	Galactose epimerase deficiency (3)
230450	Hemolytic anemia due to gamma-glutamylcysteine synthetase deficiency (1)
230500	GM1-gangliosidosis (3) Mucopolysaccharidosis IVB (3)
230800	Gaucher disease (3) Gaucher disease with cardiovascular calcification (3)
231200	Bernard-Soulier syndrome (3)
231550	Achalasia-addisonianism-alacrimia syndrome (2)
231670	Glutaricaciduria, type I (3)
231675	Glutaricaciduria, type IIC (3)
231680	Glutaricaciduria, type IIA (1)
231950	Glutathioninuria (1)
232000	Propionicacidemia, type I or pccA type (1)
232050	Propionicacidemia, type II or pccB type (3)
232200	Glycogen storage disease I (3)
232400	Glycogen storage disease IIIa (1) Glycogen storage disease IIIfb (3)
232600	McArdle disease (3)
232700	Glycogen storage disease VI (3)
232800	Glycogen storage disease VII (3)
233100	[Renal glucosuria] (2)
233690	Chronic granulomatous disease, autosomal, due to deficiency of CYBA (3)
233700	Chronic granulomatous disease due to deficiency of NCF-1 (3)
233710	Chronic granulomatous disease due to deficiency of NCF-2 (1)
234000	Factor XII deficiency (3)
234200	Neurodegeneration with brain iron accumulation (2)
235200	Hemochromatosis (3)
235800	[Histidinemia] (1)
236100	Holoprosencephaly-1 (2)
236200	Homocystinuria, B6-responsive and nonresponsive types (3)
236700	McKusick-Kaufman syndrome (2)
236730	Urofacial syndrome (2)

237300	Carbamoylphosphate synthetase I deficiency (3)
238300	Hyperglycinemia, nonketotic, type I (3)
238310	Hyperglycinemia, nonketotic, type II (1)
238600	Chylomicronemia syndrome, familial (3) Combined hyperlipemia, familial (3) Hyperlipoproteinemia I (1) Lipoprotein lipase deficiency (3)
238970	HHH syndrome (2) (?)
239500	Hyperprolinemia, type I (1)
240300	Autoimmune polyglandular disease, type I (3)
243500	Isovalericacidemia (3)
245000	Papillon-Lefevre syndrome (2)
245050	Ketoacidosis due to SCOT deficiency (3)
245200	Krabbe disease (3)
245349	Lacticacidemia due to PDX1 deficiency (3)
245900	Fish-eye disease (3) Norum disease (3)
246450	HMG-CoA lyase deficiency (3)
246530	Leukotriene C4 synthase deficiency (1)
246900	Lipoamide dehydrogenase deficiency (3)
247200	Miller-Dieker lissencephaly syndrome (2)
247640	Leukemia, acute lymphoblastic (2)
248510	Mannosidosis, beta- (3)
248600	Maple syrup urine disease, type Ia (3)
248610	Maple syrup urine disease, type II (3)
248611	Maple syrup urine disease, type Ib (3)
249000	Meckel syndrome (2)
249270	Thiamine-responsive megaloblastic anemia (2)
250100	Metachromatic leukodystrophy (3)
250800	Methemoglobinemia, type I (3) Methemoglobinemia, type II (3)
250850	Hypermethioninemia, persistent, autosomal dominant, due to methionine adenosyltransferase I/III deficiency (3)
251000	Methylmalonicaciduria, mutase deficiency type (3)
251170	Mevalonicaciduria (3)
252500	Mucopolipidosis II (1) Mucopolipidosis III (1)
252800	Mucopolysaccharidosis Ih (3) Mucopolysaccharidosis Ih/s (3) Mucopolysaccharidosis Is (3)
252920	Sanfilippo syndrome, type B (3)
252940	Sanfilippo syndrome, type D (1)
253000	Mucopolysaccharidosis IVA (3)
253200	Maroteaux-Lamy syndrome, several forms (3)
253220	Mucopolysaccharidosis VII (3)
253250	Mulibrey nanism (2)
253260	Biotinidase deficiency (3)
253270	Multiple carboxylase deficiency, biotin-responsive (3)
253601	Miyoshi myopathy, 254130 (2)

	Muscular dystrophy, limb-girdle, type 2B (2)
253700	Muscular dystrophy, limb-girdle, type 2C (3)
253800	Fukuyama type congenital muscular dystrophy (2) Walker-Warburg syndrome, 236670 (2) (?)
254210	Myasthenia gravis, familial infantile (2)
254770	Epilepsy, juvenile myoclonic (2)
255800	Schwartz-Jampel syndrome (2)
256030	Nemaline myopathy-2 (2)
256100	Nephronophthisis, juvenile (3)
256540	Galactosialidosis (3)
256550	Sialidosis, type I (3) Sialidosis, type II (3)
256731	Ceroid-lipofuscinosis, neuronal-5, variant late infantile (3)
257200	Niemann-Pick disease, type A (3) Niemann-Pick disease, type B (3)
257220	Niemann-Pick disease, type C (3) Niemann-Pick disease, type D, 257250 (2)
258501	3-methylglutaconicaciduria, type III (2)
258870	Gyrate atrophy of choroid and retina with ornithinemia, B6 responsive or unresponsive (3)
258900	Oroticaciduria (3)
259700	Osteopetrosis, recessive (2)
259730	Renal tubular acidosis-osteopetrosis syndrome (3)
259770	Osteoporosis-pseudoglioma syndrome (2)
259900	Hyperoxaluria, primary, type 1 (3)
261510	Pseudo-Zellweger syndrome (1)
261600	Phenylketonuria (3) [Hyperphenylalaninemia, mild] (3)
261640	Phenylketonuria due to PTS deficiency (3)
261670	Myopathy due to phosphoglycerate mutase deficiency (3)
262000	Bjornstad syndrome (2)
262850	Plasmin inhibitor deficiency (3)
263200	Polycystic kidney disease, autosomal recessive (2)
263700	Porphyria, congenital erythropoietic (3)
264300	Pseudohermaphroditism, male, with gynecomastia (3)
264470	Adrenoleukodystrophy, pseudoneonatal (2)
264600	Pseudovaginal perineoscrotal hypospadias (3)
264700	Pseudo-vitamin D dependency rickets 1 (2)
264900	Factor XI deficiency (3)
266100	Pyridoxine dependency with seizures (1) (?)
266150	Pyruvate carboxylase deficiency (3)
266200	Anemia, hemolytic, due to PK deficiency (3)
266300	[Hair color, red] (2)
266600	Inflammatory bowel disease-1 (2)
267750	Knobloch syndrome (2)
268800	Sandhoff disease, infantile, juvenile, and adult forms (3) Spinal muscular atrophy, HEXB-related (3)
268900	[Sarcosinemia] (2)
269920	Salla disease (2)

270200	Sjogren-Larsson syndrome (3)
270800	Spastic paraplegia-5A (2)
271245	Spinocerebellar ataxia-8, infantile, with sensory neuropathy (2)
271900	Canavan disease (3)
272750	GM2-gangliosidosis, AB variant (3)
272800	GM2-gangliosidosis, juvenile, adult (3) Tay-Sachs disease (3) [Hex A pseudodeficiency] (1)
273300	Male germ cell tumor (2)
273800	Glanzmann thrombasthenia, type A (3) Thrombocytopenia, neonatal alloimmune (1)
274180	Thromboxane synthase deficiency (2)
274270	Thymine-uraciluria (1) Fluorouracil toxicity, sensitivity to (1)
274500	Goiter, congenital (3) Hypothyroidism, congenital (3) Thyroid iodine peroxidase deficiency (1)
274600	Deafness, autosomal recessive 4 (3) Pendred syndrome (3)
275200	Graves disease, 275000 (1) Hyperthyroidism, congenital (3) Hypothyroidism, nongoitrous, due to TSH resistance (3) Thyroid adenoma, hyperfunctioning (3)
275350	Transcobalamin II deficiency (3)
276000	Pancreatitis, hereditary, 167800 (3) Trypsinogen deficiency (1)
276600	Tyrosinemia, type II (3)
276700	Tyrosinemia, type I (3)
276710	Tyrosinemia, type III (1)
276901	Usher syndrome, type 2 (3)
276902	Usher syndrome, type 3 (2)
276903	Deafness, autosomal dominant 11, neurosensory, 601317 (3) Deafness, autosomal recessive 2, neurosensory, 600060 (3) Usher syndrome, type 1B (3)
276904	Usher syndrome, type 1C (2)
277700	Werner syndrome (3)
277730	Wernicke-Korsakoff syndrome, susceptibility to (1)
277900	Wilson disease (3)
278000	Cholesteryl ester storage disease (3) Wolman disease (3)
278250	Wrinkly skin syndrome (2)
278300	Xanthinuria, type I (3)
278700	Xeroderma pigmentosum, group A (3)
278720	Xeroderma pigmentosum, group C (3)
278760	Xeroderma pigmentosum, group F (3)
300011	Cutis laxa, neonatal (3) Menkes disease, 309400 (3) Occipital horn syndrome, 304150 (3)
300029	Retinitis pigmentosa-15 (2)
300031	Mental retardation, X-linked, FRAXF type (3)

300032	Alpha-thalassemia/mental retardation syndrome, type 2, 301040 (3) Juberg-Marsidi syndrome, 309590 (3)
300044	?Wernicke-Korsakoff syndrome, susceptibility to (1)
300046	Mental retardation, X-linked 23, nonspecific (2)
300047	Mental retardation, X-linked 20 (2)
300048	Intestinal pseudoobstruction, neuronal, X-linked (2)
300049	BPNH/MR syndrome (2) Nodular heterotopia, bilateral periventricular (2)
300055	Mental retardation with psychosis, pyramidal signs, and macroorchidism (2)
300071	Night blindness, congenital stationary, type 2 (2)
300075	Coffin-Lowry syndrome, 303600 (3)
300077	Mental retardation, X-linked 29 (2)
300085	Cone dystrophy, progressive X-linked, 2 (2)
300088	Epilepsy, female restricted, with mental retardation (2)
300100	Adrenoleukodystrophy (3) Adrenomyeloneuropathy (3)
300104	Mental retardation, X-linked nonspecific, 309541 (3)
300110	Night blindness, congenital stationary, X-linked incomplete, 300071 (3)
300123	Mental retardation with isolated growth hormone deficiency (2)
300126	Dyskeratosis congenita-1, 305000 (3)
300300	Agammaglobulinemia, type 1, X-linked (3) XLA and isolated growth hormone deficiency, 307200 (3) (?)
300600	Ocular albinism, Forsius-Eriksson type (2)
300700	Albinism-deafness syndrome (2)
301000	Thrombocytopenia, X-linked, 313900 (3) Wiskott-Aldrich syndrome (3)
301200	Amelogenesis imperfecta (3)
301201	Amelogenesis imperfecta-3, hypoplastic type (2) (?)
301300	Anemia, sideroblastic/hypochromic (3)
301310	Anemia, sideroblastic, with spinocerebellar ataxia (2) (?)
301500	Fabry disease (3)
301590	Anophthalmos-1 (2) (?)
301830	Arthrogryposis, X-linked (spinal muscular atrophy, infantile, X-linked) (2)
301835	Arts syndrome (2)
301845	Bazex syndrome (2)
301900	Borjeson-Forssman-Lehmann syndrome (2)
302060	Barth syndrome (3) Cardiomyopathy, X-linked dilated, 300069 (3) Endocardial fibroelastosis-2 (2) Noncompaction of left ventricular myocardium, isolated (3)
302350	Nance-Horan syndrome (2)
302801	Charcot-Marie-Tooth neuropathy, X-linked-2, recessive (2)
302960	Chondrodysplasia punctata, X-linked dominant (2)
303400	Cleft palate, X-linked (2)
303630	Alport syndrome, 301050 (3) Leiomyomatosis-nephropathy syndrome, 308940 (1)
303631	Leiomyomatosis, diffuse, with Alport syndrome (3)
303700	Colorblindness, blue monochromatic (3)

303800	Colorblindness, deutan (3)
303900	Colorblindness, protan (3)
304040	Charcot-Marie-Tooth neuropathy, X-linked-1, dominant, 302800 (3)
304340	Mental retardation, X-linked, syndromic-5, with Dandy-Walker malformation, basal ganglia disease, and seizures (2)
304500	Deafness, X-linked 2, perceptive congenital (2)
304700	Deafness, X-linked 1, progressive (3) Jensen syndrome, 311150 (3) Mohr-Tranebjaerg syndrome (3)
304800	Diabetes insipidus, nephrogenic (3)
305100	Anhidrotic ectodermal dysplasia (2)
305400	Aarskog-Scott syndrome (3)
305435	Heterocellular hereditary persistence of fetal hemoglobin, Swiss type (2)
305450	FG syndrome (2)
305900	Favism (3) G6PD deficiency (3) Hemolytic anemia due to G6PD deficiency (3)
306000	Glycogenosis, X-linked hepatic, type I (3) Glycogenosis, X-linked hepatic, type II (3)
306100	Gonadal dysgenesis, XY female type (2)
306250	Leukemia, acute myeloid, M2 type (1)
306700	Hemophilia A (3)
306900	Hemophilia B (3)
306955	Heterotaxy, X-linked visceral (3)
306995	[?Homosexuality, male] (2)
307150	Hypertrichosis, congenital generalized (2)
307700	Hypoparathyroidism, X-linked (2)
307800	Hypophosphatemia, hereditary (3)
308000	HPRT-related gout (3) Lesch-Nyhan syndrome (3)
308100	Ichthyosis, X-linked (3) Placental steroid sulfatase deficiency (3)
308240	Lymphoproliferative syndrome, X-linked (2)
308300	Incontinentia pigmenti, sporadic type (2)
308310	Incontinentia pigmenti, familial (2)
308380	Combined immunodeficiency, X-linked, moderate, 312863 (3) Severe combined immunodeficiency, X-linked, 300400 (3)
308800	Keratosis follicularis spinulosa decalvans (2)
308840	Hydrocephalus due to aqueductal stenosis, 307000 (3) MASA syndrome, 303350 (3) Spastic paraplegia, 312900 (3)
309000	Lowe syndrome (3)
309200	Manic-depressive illness, X-linked (2) (?)
309300	Megalocornea, X-linked (2)
309470	Mental retardation, X-linked, syndromic-3, with spastic diplegia (2)
309500	Renpenning syndrome-1 (2)
309510	Mental retardation, X-linked, syndromic-1, with dystonic movements, ataxia, and seizures (2)
309548	Mental retardation, X-linked, FRAXE type (3)
309605	Mental retardation, X-linked, syndromic-4, with congenital contractures

	and low fingertip arches (2)
309610	Mental retardation, X-linked, syndromic-2, with dysmorphism and cerebral atrophy (2)
309620	Mental retardation-skeletal dysplasia (2)
309850	Brunner syndrome (3)
309900	Mucopolysaccharidosis II (3)
310300	Emery-Dreifuss muscular dystrophy (3)
310400	Myotubular myopathy, X-linked (3)
310460	Bornholm eye disease (2) Myopia-1 (2)
310490	Cowchock syndrome (2)
311050	Optic atrophy, X-linked (2)
311200	Oral-facial-digital syndrome 1 (2)
311300	Otopalatodigital syndrome, type I (2)
311510	Waisman parkinsonism-mental retardation syndrome (2)
311770	Paroxysmal nocturnal hemoglobinuria (3)
311800	Hemolytic anemia due to PGK deficiency (3) Myoglobinuria/hemolysis due to PGK deficiency (3)
311850	Phosphoribosyl pyrophosphate synthetase-related gout (3)
311870	Muscle glycogenosis (3)
312000	Panhypopituitarism, X-linked (2)
312040	N syndrome, 310465 (1) (?)
312060	Properdin deficiency, X-linked (3)
312080	Pelizaeus-Merzbacher disease (3) Spastic paraplegia-2, 312920 (3)
312170	Pyruvate dehydrogenase deficiency (3)
312700	Retinoschisis (3)
312760	Turner syndrome (1)
312865	Langer mesomelic dysplasia, 249700 (3) Leri-Weill dyschondrosteosis, 127300 (3) Short stature, idiopathic familial (3)
313400	Spondyloepiphyseal dysplasia tarda (2)
313850	Thoracoabdominal syndrome (2)
314250	Dystonia-3, torsion, with parkinsonism, Filipino type (2)
314300	Goeminne TKCR syndrome (2)
314400	Cardiac valvular dysplasia-1 (2)
314580	Wieacker-Wolff syndrome (2)
600020	Prostate cancer, 176807 (3)
600040	Colorectal cancer (3)
600045	Xeroderma pigmentosum, group E, subtype 2 (1)
600048	Breast cancer-3 (2)
600049	Myelodysplasia syndrome-1 (3)
600059	Retinitis pigmentosa-13 (2)
600065	Leukocyte adhesion deficiency, 116920 (3)
600079	Colon cancer (3)
600095	Split hand/foot malformation, type 3 (2)
600101	Deafness, autosomal dominant 2 (2)
600105	Retinitis pigmentosa-12, autosomal recessive (2)
600119	Adhalinopathy, primary (1)

	Muscular dystrophy, Duchenne-like, type 2 (3)
600138	Retinitis pigmentosa-11 (2)
600140	Rubenstein-Taybi syndrome, 180849 (3)
600143	Epilepsy, progressive, with mental retardation (2)
600160	Melanoma, 155601 (3)
600163	Long QT syndrome-3 (3)
600173	SCID, autosomal recessive, T-negative/B-positive type (3)
600175	Spinal muscular atrophy, congenital nonprogressive, of lower limbs (2)
600179	Leber congenital amaurosis, type I, 204000 (3)
600184	Carnitine acetyltransferase deficiency (1) (?)
600185	Breast cancer 2, early onset (3) Pancreatic cancer (3)
600192	Sarcoma, synovial (1)
600194	Ichthyosis bullosa of Siemens, 146800 (3)
600202	Dyslexia, specific, 2 (2)
600211	Cleidocranial dysplasia, 119600 (3)
600221	Venous malformations, multiple cutaneous and mucosal, 600195 (3)
600223	Spinocerebellar ataxia-4 (2)
600228	Pseudohypoaldosteronism, type I, 264350 (3)
600231	Palmoplantar keratoderma, Bothnia type (2)
600234	HMG-CoA synthase-2 deficiency (1)
600243	Temperature-sensitive apoptosis (1)

602574	Deafness, autosomal dominant 12, 601842 (3) Deafness, autosomal dominant 8, 601543 (3)
602575	Nail-patella syndrome with open-angle glaucoma, 137750 (3) Nail-patella syndrome, 161200 (3)
602616	Carbohydrate-deficient glycoprotein syndrome, type II, 212066 (3)
602629	Dystonia-6, torsion (2)
602631	Breast Cancer (3) Rhabdomyosarcoma, 268210 (3)
602639	Hypodontia, autosomal recessive (2)
602666	Deafness, autosomal recessive 3, 600316 (3)
602667	Nijmegen breakage syndrome, 251260 (3)
602669	Anterior segment mesenchymal dysgenesis and cataract, 107250 (3) Cataract, congenital (3)
602716	Nephrosis-1, congenital, Finnish type, 256300 (3)
602759	Prostate cancer, hereditary, 2, 176807 (2)
602771	Muscular dystrophy, congenital, with early spine rigidity (2)
602772	Retinitis pigmentosa-24 (2)
602782	Faisalabad histiocytosis (2)
602783	Spastic paraplegia-7 (3)

The polypeptides of the invention can be prepared in any suitable manner. Such polypeptides include isolated naturally occurring polypeptides, recombinantly produced polypeptides, synthetically produced polypeptides, or polypeptides produced by a combination of these methods. Means for preparing such polypeptides are well understood in the art.

The polypeptides may be in the form of the secreted protein, including the mature form, or may be a part of a larger protein, such as a fusion protein (see below). It is often advantageous to include an additional amino acid sequence which contains secretory or leader sequences, pro-sequences, sequences which aid in purification, such as multiple histidine residues, or an additional sequence for stability during recombinant production.

The polypeptides of the present invention are preferably provided in an isolated form, and preferably are substantially purified. A recombinantly produced version of a polypeptide, including the secreted polypeptide, can be substantially purified using techniques described herein or otherwise known in the art, such as, for example, by the one-step method described in Smith and Johnson, Gene 67:31-40 (1988). Polypeptides of the invention also can be purified from natural, synthetic or recombinant sources using techniques described herein or otherwise known in the art, such as, for example, antibodies of the invention raised against the colon cancer antigens in methods which are well known in the art.

The present invention provides a polynucleotide comprising, or alternatively consisting of, the nucleic acid sequence of SEQ ID NO:X, and/or a cDNA contained in the ATCC deposit. The present invention also provides a polypeptide comprising, or alternatively, consisting of, the polypeptide sequence of SEQ ID NO:Y and/or a polypeptide encoded by a cDNA contained in the ATCC deposit. Polynucleotides encoding a polypeptide comprising, or alternatively consisting of the polypeptide sequence of SEQ ID NO:Y and/or a polypeptide sequence encoded by a cDNA contained in the ATCC deposits are also encompassed by the invention.

Many polynucleotide sequences, such as EST sequences, are publicly available and accessible through sequence databases and may have been publicly available prior to conception of the present invention. Preferably, such related polynucleotides are specifically excluded from the scope of the present invention. To list every related sequence would unduly burden the disclosure of this application. Accordingly, for each "Contig Id" listed in

the third column of Table 7, preferably excluded are one or more polynucleotides comprising a nucleotide sequence described in the second column of Table 7 by the general formula of a-b, each of which are uniquely defined for the SEQ ID NO:X corresponding to that Contig Id in the fourth column of Table 7. Additionally, specific embodiments are  
5 directed to polynucleotide sequences excluding one, two, three, four or more of the specific polynucleotide sequences referenced by Genbank Accession No. for each Contig Id which may be included in column five of Table 7. In no way is this listing meant to encompass all of the sequences which may be excluded by the general formula, it is just a representative example. All references available through these accessions are hereby incorporated by  
10 reference in their entirety.

Table 7

SEQ ID NO:X	CLONE ID:Z	CONTIG ID:	GENERAL FORMULA	ACCESSION NUMBERS
1	HTWEP07	390631	Preferably excluded from the present invention are one or more polynucleotides comprising a nucleotide sequence described by the general formula of a-b, where a is any integer between 1 to 393 of SEQ ID NO:1, b is an integer of 15 to 407, where both a and b correspond to the positions of nucleotide residues shown in SEQ ID NO:1, and where b is greater than or equal to a + 14.	AL119989, T80240, AA773747, AA809992, AA281432, AF051311, AF053535, AF070615, AF145284, AB014560, U65313, AF145285
2	HODBA26	410299	Preferably excluded from the present invention are one or more polynucleotides comprising a nucleotide sequence described by the general formula of a-b, where a is any integer between 1 to 399 of SEQ ID NO:2, b is an integer of 15 to 413, where both a and b correspond to the positions of nucleotide residues shown in SEQ ID NO:2, and where b is greater than or equal to a + 14.	
3	HPMEF95	456200	Preferably excluded from the present invention are one or more polynucleotides comprising a nucleotide sequence described by the general formula of a-b, where a is any integer between 1 to 460 of	N76659, T85798, AW379474, AR016730, D50857
